Contents

Preface ............................................................................. i
Abstract ........................................................................ v
1 Introduction ................................................................... 1
2 Real Matrices .............................................................. 5
  2.1 Basic Definitions ...................................................... 5
    2.1.1 Matchant ....................................................... 9
  2.2 Compound Matrices .................................................. 11
    2.2.1 Row and Column Compounds ......................... 12
    2.2.2 Adjugate Compound Matrices ......................... 13
    2.2.3 Results on Compound Matrices ....................... 17
  2.3 Characteristic Polynomial and Eigenvalues ................ 20
  2.4 Results on Eigenvalues and Eigenvectors ................. 22
  2.5 Intrinsic Polynomial and Intrinsic Values ............... 27
3 Nonnegative Matrices .................................................. 33
  3.1 Definitions .......................................................... 33
    3.1.1 Cyclant ....................................................... 35
  3.2 Irreducible Matrices: Important Results .................. 36
  3.3 Polynomials of Nonnegative Matrices ..................... 45
    3.3.1 Intrinsic Polynomial ..................................... 46
    3.3.2 Circuit Polynomial ....................................... 47
4 Natural Matrices ........................................................ 50
  4.1 Basic Concepts ...................................................... 50
    4.1.1 Divergence and Convergence ......................... 52
    4.1.2 Confluence and Arborescence ....................... 54
  4.2 Adjacency Matrix ................................................... 56
  4.3 Matchings ........................................................... 60
    4.3.1 Matchings in Bigraphs .................................. 60
    4.3.2 Matchings in Ordinary Graphs ...................... 63
  4.4 Coverings ........................................................... 64
  4.5 Adjacency Matrix and Matchings ......................... 66
    4.5.1 Permanents and Permanent Compounds ............. 66
    4.5.2 Frobenius– König Theorem: An Interpretation .... 71
    4.5.3 Matchants and Matchant Compounds ............... 73
