Acknowledgements

My thanks are first to "Allah" the almighty for providing me with the gifts of faith, health, and strength to accomplish this study and helping me to reach this milestone.

Though, I am writing these few words as an acknowledgement for the one who lent me a gold hand to accomplish such a valuable work, with immeasurable pleasure I would like here to express my deep gratitude to my research guide Prof. Dr. G. N. Shinde, Pro-Vice-chancellor of S.R.T.M. University, Nanded, for the continuous support of my Ph.D., study during the entire course of study till finalizing of this thesis, for his patience, motivation, enthusiasm, and valuable knowledge. In fact, whatever words and expressions could be said for praising his assistance and nobility, are still not enough to thank him. This work would not have been possible without his guidance, support and encouragement. Under his guidance, I successfully overcame many difficulties and learned a lot. I cannot forget his hard times ever and never in my life.

I am thankful to the Director and all the staff members of School of physical sciences, and all the staff members of S.R.T.M. University for everything. I would like to thank all friends, for their support, encourage, cooperation and help. I am very much thankful to my wife, for her great moral support and every possible help during research work.

I am so thankful to my uncle Mr. Ahmed and his family, my brother Mr. Mohammed, my son Azzam, and all my family in Yemen for their cooperation, support, encourage and kindly help.

Mr. Adnan Abdullah Qasem Abobakr
(Research Scholar)
