3.9 Changes in the ascorbic acid content with time in various natural toddy samples ................................................................. 98
3.10 Thin Layer Chromatographic data for toddy adulterated with basic drugs ........................................................................... 99
3.11 Estimation of Diazepam ..................................................................... 100
4.1 Graph showing the body weight pattern of rats in various treated groups ........................................................................ 111
4.2 Effect of toddy adulterated with diazepam on AST level in the serum of rats ................................................................. 116
4.3 Effect of toddy adulterated with diazepam on ALT level in the serum of rats ................................................................. 116
4.4 Effect of toddy adulterated with diazepam on ALP level in the serum of rats ................................................................. 117
4.5 Effect of toddy adulterated with diazepam on GGT level in the serum of rats ................................................................. 117
4.6 Effect of toddy adulterated with diazepam on ADH level in the liver of rats ................................................................. 118
4.7 Effect of toddy adulterated with diazepam on ALDH level in the liver of rats ................................................................. 118
4.8 Effect of toddy adulterated with diazepam on Cholinesterase level in the serum of rats ................................................................. 119
4.9 Effect of toddy adulterated with diazepam on LDH level in the serum of rats ................................................................. 119
4.10 Effect of toddy adulterated with diazepam on TP level in the serum of rats ................................................................. 120
4.11 Effect of toddy adulterated with diazepam on Albumin level in the serum of rat ................................................................. 120
4.12 Effect of toddy adulterated with diazepam on TBARS level in the liver of rat ................................................................. 122
4.13 Effect of toddy adulterated with diazepam on CD level in the liver of rat ................................................................. 122
4.14 Effect of toddy adulterated with diazepam on TBARS level in the kidney of rat ................................................................. 124
4.15 Effect of toddy adulterated with diazepam on CD level in the kidney of rat ................................................................. 124
4.16 Effect of toddy adulterated with diazepam on GSH level in the liver of rat ................................................................. 127
4.17 Effect of toddy adulterated with diazepam on Catalase level in the liver of rat .................................................................. 127
4.18 Effect of toddy adulterated with diazepam on GST level in the liver of rat ................................................................. 128
4.19 Effect of toddy adulterated with diazepam on GSH level in the kidney of rat ................................................................. 129
4.20 Effect of toddy adulterated with diazepam on Catalase level in the kidney of rat ............................................................. 129
4.21 Effect of toddy adulterated with diazepam on GST level in the kidney of rat ................................................................. 130
4.22 Histopathological changes occurred in rats liver during treatment with natural toddy, shop toddy and various concentrations of diazepam along with toddy and diazepam alone .................................................................................................................. 131
4.23 Transmission electron microscopic analysis of rat brain .......... 133
4.24 Scanning electron microscopic analysis of rat brain .......... 134
5.1 Graph showing the body weight pattern of rats in various treated groups .......................................................................................................................................................................................... 145
5.2 Effect of toddy adulterated with phenobarbitone on AST level in the serum of rats ................................................................. 149
5.3 Effect of toddy adulterated with phenobarbitone on ALT level in the serum of rats ................................................................. 150
5.4 Effect of toddy adulterated with phenobarbitone on ALP level in the serum of rats ................................................................. 150
5.5 Effect of toddy adulterated with phenobarbitone on GGT level in the serum of rats ................................................................. 151
5.6 Effect of toddy adulterated with phenobarbitone on ADH level in the serum of rats ................................................................. 151
5.7 Effect of toddy adulterated with phenobarbitone on ALDH level in the serum of rats ................................................................. 152
5.8 Effect of toddy adulterated with phenobarbitone on Cholinesterase level in the serum of rats .................................................. 152
5.9 Effect of toddy adulterated with phenobarbitone on LDH level in the serum of rats ................................................................. 153
5.10 Effect of toddy adulterated with phenobarbitone on TP level in the serum of rats .............................................................. 153
5.11 Effect of toddy adulterated with phenobarbitone on Albumin level in the serum of rats ......................................................... 154
5.12 Effect of toddy adulterated with phenobarbitone on TBARS level in the liver of rats .......................................................... 155
5.13 Effect of toddy adulterated with phenobarbitone on CD level in the liver of rats .............................................................. 156
5.14 Effect of toddy adulterated with phenobarbitone on TBARS level in the kidney of rats ...................................................... 157
5.15 Effect of toddy adulterated with phenobarbitone on CD level in the kidney of rats .............................................................. 157
5.16 Effect of toddy adulterated with phenobarbitone on GSH level in the liver of rats .............................................................. 159
5.17 Effect of toddy adulterated with phenobarbitone on Catalase level in the liver of rats ........................................................... 159
5.18 Effect of toddy adulterated with phenobarbitone on GST level in the liver of rats .............................................................. 160
5.19 Effect of toddy adulterated with phenobarbitone on GSH level in the kidney of rats ........................................................... 161
5.20 Effect of toddy adulterated with phenobarbitone on Catalase level in the kidney of rats ........................................................... 161
5.21 Effect of toddy adulterated with phenobarbitone on GST level in the kidney of rats .............................................................. 162
5.22 Histopathological changes occurred in rats liver during treatment with natural toddy, shop toddy and various concentrations of phenobarbitone along with toddy and phenobarbitone alone ......................................................... 163
5.23 Transmission electron microscopic analysis of rat brain ............ 164
5.24 Scanning electron microscopic analysis of rat brain ................. 165
6.1 Graph showing the body weight pattern of rats in various treated groups .............................................................. 174
6.2 Effect of toddy adulterated with chloral hydrate on AST level in the serum of rats .......................................................... 177
6.3 Effect of toddy adulterated with chloral hydrate on ALT level in the serum of rats .......................................................... 177
6.4 Effect of toddy adulterated with chloral hydrate on ALP level in the serum of rats .......................................................... 178
6.5 Effect of toddy adulterated with chloral hydrate on GGT level in the serum of rats ......................................................... 178
6.6 Effect of toddy adulterated with chloral hydrate on ADH level in the serum of rats ......................................................... 179
6.7 Effect of toddy adulterated with chloral hydrate on ALDH level in the serum of rats ......................................................... 179
6.8 Effect of toddy adulterated with chloral hydrate on Cholinesterase level in the serum of rats ........................................ 180
6.9 Effect of toddy adulterated with chloral hydrate on LDH level in the serum of rats ......................................................... 180
6.10 Effect of toddy adulterated with chloral hydrate on TP level in the serum of rats .......................................................... 181
6.11 Effect of toddy adulterated with chloral hydrate on Albumin level in the serum of rats ..................................................... 181
6.12 Effect of toddy adulterated with chloral hydrate on TBARS level in the liver of rats ......................................................... 183
6.13 Effect of toddy adulterated with chloral hydrate on CD level in the liver of rats ............................................................ 183
6.14 Effect of toddy adulterated with chloral hydrate on TBARS level in the kidney of rats ..................................................... 185
6.15 Effect of toddy adulterated with chloral hydrate on CD level in the kidney of rats ............................................................ 185
6.16 Effect of toddy adulterated with chloral hydrate on GSH level in the liver of rats ............................................................ 187
6.17 Effect of toddy adulterated with chloral hydrate on Catalase level in the liver of rats ......................................................... 187
6.18 Effect of toddy adulterated with chloral hydrate on GST level in the liver of rats ............................................................. 188
6.19 Effect of toddy adulterated with chloral hydrate on GSH level in the kidney of rats ................................................................. 189
6.20 Effect of toddy adulterated with chloral hydrate on Catalase level in the kidney of rats ................................................. 189
6.21 Effect of toddy adulterated with chloral hydrate on GST level in the kidney of rats .................................................. 190
6.22 Histopathological changes occurred in rats liver during treatment with natural toddy, shop toddy and various concentrations of chloral hydrate along with toddy and chloral hydrate alone ................................................................. 191
6.23 Transmission electron microscopic analysis of rat brain .............. 192
6.24 Scanning electron microscopic analysis of rat brain ......................... 193
7.1 Effect of natural toddy, ethyl alcohol, shop toddy and diazepam alone and in combination with natural toddy on the growth of chang cells determined by MTT assay ........................................... 203
7.2. Effect of natural toddy, ethyl alcohol, shop toddy and phenobarbitone alone and in combination with natural toddy on the growth of chang cells determined by MTT assay .................. 203
7.3. Effect of natural toddy, ethyl alcohol, shop toddy and chloral hydrate alone and in combination with natural toddy on the growth of chang cells determined by MTT assay ...................... 204
7.4. Fluorescence image of chang liver cells treated with 5,5’6,6’ tetrachloro-1,1’,3,3’-tetraethylbenzimidazolylcarbocyanine iodide (JC-1) after 18 h incubation alone, with natural toddy and shop toddy ................................................................. 205
7.5 Fluorescence image of chang liver cells treated with 5,5’,6,6’ tetrachloro-1,1’,3,3’-tetraethylbenzimidazolylcarbocyanine iodide (JC-1) after 18 h incubation with toddy, diazepam and combination of both ..................................................................... 205
7.6 Fluorescence image of chang liver cells treated with 5,5’,6,6’ tetrachloro-1,1’,3,3’-tetraethylbenzimidazolylcarbocyanine iodide (JC-1) after 18 h incubation with toddy, phenobarbitone and combination of both ................................................................. 206
7.7 Fluorescence image of chang liver cells treated with 5,5’,6,6’ tetrachloro-1,1’,3,3’-tetraethylbenzimidazolylcarbocyanine iodide(JC-1) after 18 h incubation with toddy, chloral hydrate and combination of both ..................................................................... 206
