List of Tables/ Figures

2.8.1.1. Criteria to determine Sensitivity of a Geographical Area
2.8.1.2. Criteria to decide Ecological Sensitivity of Western Ghats
2.8.1.3. The Gadgil Report. Spread of ESZs in Western Ghats region of Kerala
2.8.2.1. The list showing Natural and Cultural Landscape- Source (Kasthurirangan, et al. 2013, 65)
3.6.1. Three Dimensional Sustainability- Source (Collins 2009, 48)
3.6.2 Working Model of 'Effective Deliberation"
3.15.1 Stages in Implementing Cap-and-Trade Policies
3.18.1. Parameters for assigning Ecological Sensitivity in India (Primary & Secondary Criteria)
4.12.2. Protected Areas in the project area
4.12.3. Current utilisation of the project area. Source: UNDP Project Document (India High Range Landscape Project)
5.2.1. The Study Area (lined using broken strokes)
5.4.1 Socio-Demographic Profile of Respondents
5.5.1. Prioritization of the Global Environmental Problems
5.5.2.1 Prioritisation of local issues pertains to the Western Ghats.
5.5.3. Statistics showing the frequencies with respect to environmental problems in the Western Ghats
5.6.1. Response of research population regarding different environmental problems
5.6.2.1. Awareness of people regarding EFL and ESA
5.7.1. Awareness Level of People with respect to Environmental Problems
5.7.2.1. Awareness level of people with various environmental problems with respect to their sex
5.7.3.1 Awareness about various environmental problems in relation to their age
5.7.3.2 Descriptive statistics on awareness about various environmental problems in relation to their age

5.7.3.3 Least Significant Difference (LSD) multiple comparison between different age groups showing Awareness about various environmental problems in relation to their age

5.7.4.1 Awareness of people about various environmental problems in relation to their education.

5.7.4.2 Descriptive statistics on awareness of people about various environmental problems in relation to their education. – ANOVA

5.7.5.1 Awareness of people about various environmental problems in relation to their income

5.7.5.2 Descriptive statistics between Awareness of people about various environmental problems in relation to their income- ANOVA

5.7.5.3 Least Significant Difference (LSD) multiple comparisons between different income groups with respect to their awareness about environmental problems.

5.7.6.1 Awareness of people about various environmental problems in relation to their career

5.7.6.2 Descriptive statistics on Awareness of people about various environmental problems in relation to their career- ANOVA

5.7.6.3 Least Significant Difference (LSD) multiple comparison on awareness of people about various environmental problems in relation to their career

5.7.7.1 Statistics showing Awareness of people about various environmental problems in relation to their political affiliation

5.7.7.2 Descriptive statistics on Awareness of people about various environmental problems in relation to their political affiliation - ANOVA

5.8.2.1 Areas of Tension with respect to the acceptance of political parties and environmental laws

5.8.2.2.1 Tension areas and their mean
5.8.3.1. Tension in accepting political parties and environmental laws in the process of environmental governance in relation to sex

5.8.4.1. Distribution of Tension in accepting political parties and environmental laws in the process of environmental governance in relation to age

5.8.4.2. Tension in accepting political parties and environmental laws in the process of environmental governance in relation to age

5.8.4.3. Least Significant Difference (LSD) multiple comparison between different age groups and Tension in accepting political parties and environmental laws in the process of environmental governance in relation to age groups.

5.8.5.1. Tension in accepting political parties and environmental laws in the process of environmental governance in relation to education

5.8.5.2. Descriptive statistics between different groups having different educational level of the tension in accepting political parties and environmental laws in the process of environmental governance in relation to education -ANOVA

5.8.5.3. Least Significant Difference (LSD) multiple comparison between different educational levels in relation to tension in accepting political parties and environmental laws in the process of environmental governance.

5.8.6.1. Tension in accepting political parties and environmental laws in the process of environmental governance in relation to income

5.8.6.2. Descriptive statistics on Tension in accepting political parties and environmental laws in the process of environmental governance in relation to income -ANOVA

5.8.6.3. Least Significant Difference (LSD) multiple comparisons between different income groups with respect to Tension in accepting political parties and environmental laws in the process of environmental governance

5.8.7.1. Tension in accepting political parties and environmental laws in the process of environmental governance in relation to political affiliation.
5.8.7.2. Descriptive statistics on Tension in accepting political parties and environmental laws in the process of environmental governance in relation to political affiliation -ANOVA

5.8.7.3. Least Significant Difference (LSD) multiple comparison among different groups on tension in accepting political parties and environmental laws in the process of environmental governance in relation to political affiliation.

5.9.1.1. Faith of people with regard to environmental laws and regulations

5.9.1.2. Opportunistic role of political parties and opinion of people

5.9.2.1. Statistical analysis showing an agency shift to find out agency shift in the political landscape with regard to environmental governance

5.9.3.1 Agency shifts in the political landscape with regard to environmental governance in relation to sex

5.9.4.1. Agency shifts in the political landscape with regard to environmental governance in relation to age

5.9.4.2. Descriptive statistics on agency shift in political landscape with regard to environmental governance in relation to age

5.9.4.3. Least Significant Difference (LSD). On agency shift in the political landscape with regard to environmental governance in relation to age

5.9.5.1. Agency shifts in the political landscape with regard to environmental governance in relation to Education

5.9.5.2. Descriptive statistics on agency shift in political landscape with regard to environmental governance in relation to Education - ANOVA

5.9.5.3 Least Significant Difference (LSD)-Multiple Comparison between different groups on agency shift in political landscape with regard to environmental governance in relation to Education

5.9.6.1. Agency shifts in the political landscape with regard to environmental governance in relation to income

5.9.6.2 Descriptive statistics on agency shift in political landscape with regard to environmental governance in relation to income
5.9.6.3. Least Significant Difference (LSD) multiple comparison between different income groups and their relationship between agency shift and environmental governance

5.9.7.1. Agency shifts in the political landscape with regard to environmental governance in relation to political affiliation

5.9.7.2. Descriptive statistics on Agency shift in political landscape with regard to environmental governance in relation to political affiliation ANOVA

5.9.7.3. Least Significant Difference (LSD) multiple comparison among different groups having various political affiliation in relation to agency shift.

5.10.1. Effects of Environmental laws among people

5.10.2. Level of acceptance of environmental laws of people who are living in the Western Ghats-

5.11.1. Hypothesis in relation to socio-demographic factors.

5.11.2. Convergence towards significance level of 0.000 in relation to various socio-demographic factors and core objectives.
