Abbreviations used i-iv

General introduction 1-3

Review of literature 4-42

Hepatitis B - the disease

History

Epidemiology

Transmission

Clinical types

Acute hepatitis
Chronic hepatitis
Fulminant hepatitis
Hepatocellular carcinoma

Diagnosis

Serological markers of infection

Hepatitis B surface Antigen
Anti-HBsAg

Hepatitis B core Antigen
Anti-HBcAg

Hepatitis B e Antigen
Anti-HBeAg

Hepatitis B x Antigen
Anti-HBxAg

HBV DNA polymerase

The liver as the target organ

HBV structure

Pre-S/S ORF

Small surface protein
Middle surface protein
Large surface protein
Pre-C/C ORF

Hepatitis B core Protein
Hepatitis B precore Protein
Polymerase ORF
Hepatitis B X ORF

The hepatitis B virus life cycle

Immune responses in hepatitis B infection

Non-specific immune response

Specific immune response

CD4+ T-helper cells
Cytotoxic T lymphocytes
Humoral immune response

Genetics of infectious diseases

Evidence and extent of role of host genetic components

Familial studies

Adoptee or twin studies
Identical and non identical twin studies

Strategies for identifying disease susceptibility genes

Genetic linkage studies
Affected sib pair studies
The transmission test for LD
Genome-wide scan
Candidate gene approach

Genetic susceptibility and hepatitis B

Indirect evidence of the importance of genetic parameters in hepatitis B

Candidate genes shown to be associated with susceptibility to HBV

HLA class I and II alleles
Tumor necrosis factor-alpha
Interferon-gamma
Interleukin-1B and IL-2 antagonist genes
Interleukin-10
Interleukin-6
Transforming growth factor
Mannose Binding Protein
Vitamin D receptor gene
Estrogen receptor gene

Conclusions and prospects for study of HBV resistant alleles
Candidate genes chosen in the present study

Fas/Fas L
Transforming growth factor-beta1 (TGF-β1)
Tumour necrosis factor alpha1 (TNF-α)
Interleukin 6 (IL6)

Liver damage, viral control and candidate genes for hepatitis B infection
Liver and apoptosis
HBV–a non cytopathic virus

Non-cytolytic removal of the virus
Role played by non-antigen specific cells
Liver regeneration

Liver damage, viral control and regeneration in response to HBV infection

Aims and objectives

Materials and methods

Materials

Chemicals
Enzymes
Plastic ware and glassware
Kits
Miscellaneous
Subjects
PCR primers and oligos for site directed mutagenesis
Culture media
Maintenance of cell lines

Methods

High molecular weight genomic DNA isolation from peripheral blood samples
Agarose gel electrophoresis
Polymorphism studied
Polymerase chain reaction of the selected regions of candidate genes
Mutation screening by single stranded conformation polymorphism
Silver staining of polyacrylamide gels
DNA band elution from silver stained polyacrylamide gel
Elution of DNA bands from agarose gels
Cloning of PCR products in pGEM vector
Preparation of competent cells by calcium chloride treatment
Transformation of competent cells
Single colony PCR
Plasmid DNA isolation
Plasmid isolation by TELT method
DNA sequencing (Automated)
Isolation of plasmid using sigma mini prep column
Statistical analysis
Construction of Fas promoter clone in PGL3 basic vector luciferase vectors
Mutagenesis of clone in PGL3 vector
Transient transfections and reporter gene assays

Results

Analysis of Genotype frequencies in hepatitis patients and controls
Status of Fas promoter polymorphism
Status of TGF-β1 promoter, part of 5'UTR and exon 1 polymorphisms
Status of IL-6 promoter polymorphism
Status of TNF-α promoter polymorphisms

Analysis of the interaction between the polymorphisms using logistic regression
Interaction between polymorphisms in Fas and TGF-β1
Interaction between polymorphisms in Fas and IL-6
Interaction between polymorphisms in Fas and TNF-α
Interaction between polymorphisms in TGF-β1 and TNF-α

Analysis of genotype combinations
Comparisons between patients with viral hepatitis and controls
Genotype combinations associated with risk/clearance or retention of HBeAg
Genotype combinations associated with risk/clearance of HBsAg
Analysis of genotyped hepatitis patients with clinical parameters

-1378 G>A Polymorphism in Fas
-1640 G>A, -1349 T>C, +29 C>T and +74 G>C polymorphisms in TGF-β1
-236 G>C polymorphism in Interleukin 6
-488 G>A and -418 G>A polymorphisms in Tumour Necrosis factor –alpha

Reporter assay for G>A polymorphism at –1378 position in Fas promoter
