Acknowledgements

As my research for a Ph.D. degree comes to a close, culminating in the writing of this thesis, it seems to me like completing a long and arduous journey on some unknown difficult terrain. In retrospect, I wonder if I could have accomplished this feat without the involvement, support and benevolence of many whose reference may not appear elsewhere in this dissertation. I owe to them much more than I can possibly express, but, as a humble gesture of appreciation and gratitude, it would be obligatory to put them on record. It is, however, needless to say that, although the credit is only partially mine, I am solely responsible for any error found in this thesis.

I am deeply indebted to my supervisor, Prof. Ramprasad Sengupta, who deserves the maximum credit for not only navigating my research work with able hands, but also for being the custodian of my welfare at all times. Although over the years we have developed strong personal ties, his integrity is such that he never compromised on the professional front. In him I found that blend of sensitivity and firmness as a supervisor, which perfectly suited my requirements. His keen interest in my work got me the opportunities, which made this research possible and so much easier. On a more personal level I enjoyed his affection, love and encouragement, which kept me going all this while. I do not think I have the words to express my deep gratitude for him and it appears almost preposterous to thank him for what he has done for me.

I owe a very special debt to Mr. T.L. Sankar for giving me the opportunity to associate with the Administrative Staff College of India (Hyderabad) on a World Bank Project, which has contributed significantly to my research as well as my understanding of the subject. Considered to be an authority in the area of Energy and the Power Sector, it was a privilege and a ‘learning experience’ for me to be associated with a person of such eminence and wisdom. My initiation into the practical issues of power system planning was through him. He took keen interest in my Ph.D. research and, despite being occupied with more important matters all the time, never failed to enquire about the progress of my research. He arranged for a project office in Delhi so that I did not have to compromise with my thesis work. It was his kindness that he allowed me to use the data, which I had collected for the project, the background papers, which I had contributed, and other important documents for my Ph.D. case study. I can never really recompense my debts to him.

I am immensely grateful to Prof. Nigel Lucas (Director, ERM of UK) for teaching me and explaining the intricacies of a PC based Power System Expansion Plan Software (A/S Plan model). He had the wonderful ability to communicate extremely complicated issues with great clarity and simplicity. I was fortunate to be exposed to many technical issues in the power sector by him, an erudite experience, which later proved immensely valuable while formulating the model for my thesis. He also took the pain of sending me a copy of the book on power system planning, which he used to teach as a professor of physics in the Imperial College of London.

During the project with the Administrative Staff College of India, I had the wonderful opportunity to closely interact and enjoy the companionship of Dr. P.D. Jose, faculty of the College, and Mr. C.R. Subrahmanya, Senior Engineer with the APSEB. Dr. Jose, a fresh doctorate from IIM, Ahmedabad, could appreciate my agonies related to the thesis and, besides
being encouraging all the time, went out of his way to help me. He also acted as a mediator and moderator for the several fervent deliberations that I used to have with Mr. Subrahmanyam. Discussions with Mr. Subrahmanyam helped me considerably in understanding the operations of the power sector. He took great pains in taking me to almost all the departments of APSEB (Vidyut Soudha) and introducing me to the engineers and experts. I would not have had access to such detailed information and data, in such a short period of time, without his active initiative. I will always be grateful to both of them for everything.

It was a privilege and pleasure to be associated with the faculty of the Administrative Staff College of India. The cordiality and hospitality extended to me by the faculty and staff of the College will always remain with me as a sweet and memorable experience. I am grateful to all of them. However, I would particularly like to mention Dr. B.Bowonder, Dr. P.Sudhakar, Mr. V.Srinivasachary, Ms. Nirmala Apsingikar, Dr. Anil Sood, Dr. Paramita Dasgupta, Dr. Usha Ramachandra, Mr. S.S.R.Prasad and Vakula Devi.

Special thanks are due to Mr. V.V.S.R.Hanumantha Rao (formerly with the Planning Commission), Dr. Robin Bates (The World Bank), Dr. Imran Mudassar (The World Bank), Dr. M.V.Krishna Rao (Member Distribution, APSEB) and Mr. Paul Lexington (Principal Economist, ERM of UK). Discussions with them immensely benefited my understanding of the planning procedures in the power sector and its economics.

My association with the Indian Institute of Management, Calcutta, has been profoundly rewarding. I am especially obligated to Prof. Amitava Bose (Director, IIMC) for kindly granting me permission to use the computational facilities, which included the use of a licensed version of GAMS 2.25, and access the library facilities. Realizing the time-intensive nature of the computations involved, he consented to dedicate a computer in the Data processing Centre (DPC) of the Institute for this research work.

I am extremely indebted to Prof. Nilotpal Chakravarty (IIMC) for painstakingly going through an earlier version of my model and making some extremely useful suggestions, that improved the presentation and later simplified the programming of the model considerably. It was his benevolence to involve me in a project so that I could have hands-on-experience of working with GAMS. This not only helped me in learning the intricacies of the software but also gave me a wonderful opportunity to work with some eminent academicians. It was an honour and a great academic experience to assist Prof. Chakravarty, Prof. S.D.Moitra (IIMC) and Prof.S.K.Basu (Director, NIMC) on the project.

I am also grateful to Mr. C. Krishna Kumar, at that time a student of the Fellow Programme of the IIMC in his finishing stages of research, for finding time from his very busy schedule to introduce me to the basics of GAMS.

The ambience and facilities of IIMC provided tremendous impetus to my research work, and this was enhanced manifold by the warmth, co-operation and assistance of the faculty and staff of the Institute. Although I am obliged to all of them, but I would especially like to thank Prof. Raghabendra Chattopadhyay, Mr. Sukumar Majumdar and Mr. Rothin Pal.
Discussions with Prof. M.K.Rakshit and Prof. Dipankar Coondo helped me immensely in understanding the strengths and limitations of this study, and helped me to get direction for further research as well as scope for improvement.

My years in the Centre for Economic Studies and Planning, Jawaharlal Nehru University, as a student, have been an immensely gratifying experience for me. I consider myself privileged and lucky to have been in the august presence and under the tutelage of so many good teachers and economists for so long. My interest in research, and whatever little aptitude I have acquired for it, owe to all of them in large or small measure. Their sustained interest in my personal and professional welfare was a constant source of encouragement and kept me sailing, even through troubled waters. Although I owe profound debts to all of them, I would particularly like to mention the late Dr. Avanindranath Bhatt, Prof. Anjan Mukherji, Prof. Prabhat Patnaik, Prof. Deepak Nayyar, Prof. Satish Jain, Dr. Arun Kumar, Dr. Pradip Choudhury, Dr. Krishnendu Ghosh Dastidar and Dr. Archana Aggarwal.

I will always be obligated to Mr. Rajagopal, Mr. Bisht and Mr. Bache Singh of the Centre for Economic Studies and Planning, J.N.U., for their unfailing courtesy and assistance.

I will take this opportunity to thank the staff of the School of Social Sciences, J.N.U., for their kind co-operation and help during these years of my association with the school.

I wish to thank the University Grants Commission for granting me a fellowship to sustain my research work and me for five years of my M.Phil./Ph.D. programme.

I am obliged to thank the Library Staffs of the Jawaharlal Nehru University (New Delhi), Tata Energy Research Institute (New Delhi), Planning Commission (New Delhi), Central Electricity Authority (New Delhi), National Institute of Public Finance and Policy (New Delhi), Indian Institute of Management (Calcutta), Administrative Staff College of India (Hyderabad), Andhra Pradesh State Electricity Board (Hyderabad), Bureau of Economics and Statistics (Hyderabad) and Centre for Economics and Social Studies (Hyderabad).

I owe very special debts to Subrata, Saubhik, Sumon, Partha (Pal) and Sudipa. I made many unreasonable demands on their time and they always accommodated me without even the slightest of hesitation, despite having numerous other commitments. Subrata has contributed significantly at various stages of the formulation of my model, and had bailed me out of some seemingly impossible situations. Discussions with him have greatly added to the quality of this work. His erudite company and self-discipline has been a constant source of inspiration for me. Saubhik, the genial genie, came to my rescue on several occasions and was always there to help me with my research related work. His incisive comments on some chapters of an earlier draft were extremely helpful. Sumon, my buddy from school, and now a senior economist in ICRA, was always there as a sounding board, occasionally chipping in with some useful suggestions. He was of great help to my research related work during the period of my association with IIMC. Sudipa took great pains in sending me materials related to my research from Mumbai.

I am grateful to Subrata, Ranja and Dipankar for painstakingly going through some of the important chapters at the last moment and suggesting necessary editing and corrections.
I could not have sustained this endeavour for all these years without the active support, encouragement, co-operation and above all the companionship of my friends. They were always there to share my sorrows, agonies and joys. It gives me great pleasure to express my gratitude to Hiranya(da), Mritun(da) Krishnendu(da), Saumyen(da), Subrata(da), Sumon, Anindya (Dhar), Venkat, Pinki, Bobby, Bipasha, Kesta, Ana, Bhawati, Subrata, Ranja, Sreejata, Gouranga, Tapas, Dipankar, Manish (Saurav), Ashis, Prosenjit, Rupa, Mousumi, Ananya, Partha, Niladri, Saubhik and Ralitza.

My sincere thanks goes to Uday, Sabya (Kar), Chatto, Suparna, Hajru, Sabya (Mukherjee), Atulan, Manish (Gupta), Alok, Avinash, Rajdeep, Arnab, Paramita, Ragu, Malini, Beena and Murali, for their help and encouragement. I would also like to extend my thanks to those whose names may not appear here, but whose companionship I have always cherished and whose happy memories will always remain with me.

I would like to take this opportunity to express my sincere gratitude to Sailesh Jethu, Dada, Bhaidi, Mashimoni, Bulandidi, Mashima/Meshomoshai (Mr. and Mrs. S.N. Mitra), Kabul Jethu, Iru Jethuma, Shelly Kakima, Baccha Kaku, Mashima/Meshomoshai (Mr. and Mrs. N. Sengupta), and Sheiladi. Their sheer kindness, love and affection meant a lot to me.

Finally, I reserve my deepest gratitude for my parents. Without their support and encouragement nothing would have been possible. It is their love and affection that gave me the strength to face the challenges and hardships during these years. In this moment of happiness it gives me great pain at the thought that I will not be able to show the thesis to Baba, who is no more with us. As a very small token of my reverence, I dedicate this thesis to Baba and Ma for always believing in me.

September, 1999
