LIST OF TABLES

Table 1.1: Different types of chewing tobacco. 3
Table 1.2: Studies carried out till date on the genotoxicity of Pan masala and Gutkha chewers. 5-6
Table 1.3: Composition of pan masala and gutkha and its source/preparation. 8
Table 1.4: Major carcinogenic and genotoxic agents in Pan masala and Gutkha. 11
Table 2.1: Total micronucleus frequency per 2000 cells per individual in the buccal region. 23
Table 2.2: Micronucleus distribution from combined data. 23
Table 2.3: Age distribution of cases and controls. 25
Table 3.1: Total micronucleus frequency per 2000 cells per individual in buccal region of Control, Gutkha users and OSMP patients. 30
Table 3.2: Micronucleus distribution in various groups. 30
Table 3.3: Age distribution among various groups. 30
Table 4.1: Comet tail length in different groups. 39
Table 4.2: Frequency of cigarette, gutka and pan masala intake by various groups. 39
Table 5.1: Micronucleus frequency among various groups. 50
Table 5.2: Combined (male and female) micronucleus frequency in buccal epithelial cells among various groups. 50
Table 5.3: Age distribution among various groups. 50
Table 5.4: Micronucleus frequency among various groups on the basis of duration of keeping the chewables in mouth. 50
Table 5.5: Micronucleus frequency among various groups on the basis of duration of addiction of chewables. 51
Table 5.6: Micronucleus frequency among various groups on the basis of number of pouches consumed per day. 51
Table 5.7: Comet tail length among gutkha and pan masala chewers on the basis of duration of keeping in mouth.

Table 5.8: Comet tail length among gutkha and pan masala chewers in the basis of duration of addiction of chewables.

Table 5.9: Comet tail length among gutkha and pan masala chewers on the basis of number of pouches consumed per day.

Table 5.10: Comet tail length (combined male and female) among different groups.

Table 6: Total micronucleus frequency among different groups, MN micronucleus, MN⁻ micronucleus without centromere, MN⁺ micronucleus with centromere.

SUPPLEMENTARY TABLES

Table 5S1: Comparison of total number of micronucleus frequency in different groups (control, gutkha and pan masala chewers) by ANOVA.

Table 5S2: Comparison of comet tail length by ANOVA in different groups (control, gutkha and pan masala chewers).

Table 5S3: Comparison of comet tail length by ANOVA among gutkha chewers on the basis of duration (5, 10, 15 and 20 minutes) of keeping in the mouth.

Table 5S4: Comparison of comet tail length by ANOVA among gutkha chewers on the basis of duration (1, 2-3, 4-6, 7-8, 9-10 and 11-15 years) of chewables.

Table 5S5: Comparison of comet tail length by ANOVA among gutkha chewers on the basis of number of pouches (2-5, 6-10, 11-15, 15-20) consumed per day.

Table 5S6: Comparison of comet tail length by ANOVA among Pan masala chewers on the basis of duration (5, 10, 15 and 20 minutes) of keeping in the mouth.

Table 5S7: Comparison of comet tail length by ANOVA among pan masala chewers on the basis of duration (1, 2-3, 4-6, 7-8, 9-10 and 11-15 years) of chewables.

Table 5S8: Comparison of comet tail length by ANOVA among pan masala chewers on the basis of number of pouches (2-5, 6-10, 11-15, 15-20) consumed per day.
Table 5S9: Multiple comparison of comet tail length in different group by Tukey HSD.

Table 5S10: Multiple comparison of comet tail length among gutkha and pan masala chewers on the basis of duration of keeping it in mouth by Tukey HSD.

Table 5S11: Multiple comparison of comet tail length among gutkha and pan masala chewers on the basis of duration of addiction by Tukey HSD.

Table 5S12: Multiple comparison of comet tail length among gutkha and pan masala chewers on the basis of duration of number of pouches consumed per day by Tukey HSD.

Table 6S1: Comparison of total cell with MN per individual in different groups by ANOVA.

Table 6S2: Comparison of cells with MN per individual in different groups by ANOVA.

Table 6S3: Comparison of cells with MN per individual in different groups by ANOVA.

Table 6S4: Comparison of cells with unknown MN per individual in different groups by ANOVA.

Table 6S5: Multiple comparison of total cells with MN per individual in different groups by Tukey HSD.

Table 6S6: Multiple comparison of cells with MN per individual in different groups by Tukey HSD.

Table 6S7: Multiple comparison of cells with MN per individual in different groups by Tukey HSD.

Table 6S8: Multiple comparison of cells with unknown MN per individual in different groups by Tukey HSD.
