AIMS AND OBJECTIVES

Aims:

• To find different arterial patterns in the superficial and deep palmar arches of the hand.

• To Study the morphology and morphometry of arteries forming the arch

• Compare the results of present study with previous one.

Objectives

• To classify the arterial arches.

• To find incidence of different arterial arches in the hand.

• To measure the size of arteries contributing the arches.

• To study location of the arches with respect to surface landmark.

• To draw out the differences in the results between present and previous study.
