List of Illustrations

This thesis is supported by the maps and diagrams, which appear in the following sequence:

Fig. 1: Location map of Birbhum district......................................................................................... 2
Fig. 2: Rural population as percentage of total population................................................................. 4
Fig. 3: Rural population density (1991)............................................................................................ 13
Fig. 4: Relief...................................................................................................................................... 15
Fig. 5: Drainage.................................................................................................................................. 16
Fig. 6: Grid location and relative relief............................................................................................. 20
Fig. 7: Relative relief map.................................................................................................................. 21
Fig. 8: Scatter diagram (relative relief and rural population density)............................................... 23
Fig. 9: Relationship between rural population density and relative relief........................................ 25
Fig. 10: Grid location & dissection Index.......................................................................................... 30
Fig. 11: Dissection index map........................................................................................................... 31
Fig. 12: Scatter diagram (dissection index and rural population density)........................................ 33
Fig. 13: Grid location and slope........................................................................................................ 36
Fig. 14: Slope map............................................................................................................................... 37
Fig. 15: Scatter diagram (slope and rural population density).......................................................... 39
Fig. 16: Relationship between rural population density and slope.................................................... 41
Fig. 17: Average annual rainfall map................................................................................................ 44
Fig. 18: Scatter diagram (average annual rainfall and rural population density)............................. 46
Fig. 19: Relationship between rural population density and average annual rainfall....................... 48
Fig. 20: Grid location and drainage density....................................................................................... 53
Fig. 21: Drainage density map........................................................................................................... 54
Fig. 22: Scatter diagram (drainage density and rural population density)......................................... 55
Fig. 23: Map showing water table in April........................................................................................ 61
Fig. 24: Map showing water table in November.............................................................................. 62
Fig. 25: Average annual water table................................................................................................ 64
Fig. 26: Scatter diagram (depth of average annual water table and rural population density)........ 66
Fig. 27: Relationship between rural population density and average annual water table............... 68
Fig. 28: Area under forest (1991)...................................................................................................... 75
Fig. 29: Scatter diagram (percentage of area under forest and rural population density)................ 77
Fig. 30: Relationship between rural population density and percentage of area under forest........... 79
Fig. 31: Soil fertility (NPKC) map........................................................................................................ 82
Fig. 32: Scatter diagram (soil fertility and rural population density).................................................... 84
Fig. 33: Land available for cultivation (1991).................................................................................... 94
Fig. 34: Scatter diagram (percentage of land available for cultivation and rural population density) 96
Fig. 35: Relationship between rural population density and percentage of land available for cultivation......................................................................................................................... 98
Fig. 36: Percentage of irrigated area.................................................................................................. 102
Fig. 37: Scatter diagram (percentage of irrigated area and rural population density).................... 104
Fig. 38: Relationship between rural population density and irrigated area...................................... 106
Fig. 39: Agricultural density............................................................................................................ 109
Fig. 40: Scatter diagram (agricultural density and rural population density).................................... 111
Fig. 41: Relationship between rural population density and agricultural density............................ 113
Fig. 42: Cropping intensity (1996-97)............................................................................................... 116
Fig. 43: Scatter diagram (cropping intensity and rural population density)....................................... 118
Fig. 44: Percentage of Literates (1991)........................................................................................... 121
Fig. 45: Scatter diagram (literacy and rural population density)....................................................... 123
Fig. 46: Relationship between rural population density and literacy............................................. 125
Fig. 47: Road density....................................................................................................................... 128
Fig. 48: Scatter diagram (road density and rural population density)................................................ 129
Fig. 49: Relationship between rural population density and road density........................................ 131
Fig. 50: Availability of electricity...................................................................................................... 136
Fig. 51: Scatter diagram (availability of electricity and rural population density)............................ 138
Fig. 52: Relation of rural population density to relative relief, dissection index, average annual rainfall, depth of ground water table, land available for cultivation, irrigated area and agricultural density................................................................. 147
List of Photographs
This thesis is supported by photographs, which appear in the following sequence:

Photo 1. 'Mama-Bhagne Pahar' - an eroded granite hill in Dubrajpur block
Photo 2. Erosion of laterite gives rise to poor quality soil
Photo 3. Undulating rocky terrain in the Bakreswar Upland in Rajnagar block
Photo 4. Upland topography in Bolpur block in the Suri-Bolpur region
Photo 5. Rice fields with hay stubs in the eastern flats
Photo 6. Ajay River near Kenduli in Illambazar block. Sand excavation from riverbed in winter. High-tension cables bring electricity from Burdwan district
Photo 7. Granite boulders are typical of the western part of the district as in Suri 1
Photo 8. Exfoliation in granite near Suri
Photo 9. Mayurakshi River near Tilpara barrage in Suri I block
Photo 10. Mayurakshi River near Mayureswar in the eastern part of Birbhum
Photo 11 Paddy field by Chatankura Bil, Muraroi I block
Photo 12. Handsome stands of tal and lush paddy field in the rainy season in Mayureswar block
Photo 13. Village with thatched cottages and lush bamboo groves beside a water tank in Illambazar block
Photo 14. Open forest on eroded lateritic soil in Suri II block
Photo 15. Afforestation with 'akashmoni' on poor soil in Labpur block
Photo 16. Chaupahari forest in Illambazar block
Photo 17. Mixed forest with sal predominating near Bakreswar in Dubrajpur block
Photo 18. Land degradation by gully erosion near Dubrajpur
Photo 19. Afforestation along newly constructed state highway near Suri
Photo 20. Tank (dighi) with high embankment stores rainwater. Poor quality soil is used in brick making
Photo 21. Unproductive land with scattered trees near Dubrajpur
Photo 22. Coarse texture of soil on 'danga' land
Photo 23. Soil erosion in 'khowai' near Shantiniketan
Photo 24. Deep gully erosion and leached soil near Bolpur
Photo 25. Kopai canal near Bolpur with unmetalled road running beside it. Akashmoni and eucalyptus planted to check soil erosion
Photo 26. Extensive soil erosion and gullying beside canal sluice near Bolpur
Photo 27. Power pylon in harvested rice paddy
Photo 28. Dusty unmetalled road in Joydeb-Kenduli village from the bank of Ajay river to Radhabinod temple. The modern market building contrasts with the older structures nearby
Photo 29. Close up of the new market place in Kenduli
Photo 30. Neglected but exquisitely worked terracotta façade of Radhabinod temple in Kenduli
The following abbreviations appear at different places in this thesis:

<table>
<thead>
<tr>
<th>Abbreviations</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>C. D.</td>
<td>Community Development</td>
</tr>
<tr>
<td>m.b.g.l</td>
<td>metres below ground level</td>
</tr>
</tbody>
</table>

Local terms:

- aman: winter rice
- aush: autumn rice
- dighi: artificial lake
- bil: water body
- gram panchayat: units of local self-government
- panchayat samities: self-government units
- nadi: river
- nala: brook, stream
- mouzas: revenue village(s)
- rabi: winter (of crops)
- pahar: hill
- danga: high poor land
- khowai: barren undulations

Other local terms have been explained in context.
