ACKNOWLEDGEMENTS

The present study is the outcome of continued and immense support of my esteemed teacher Prof. R.C. Sharma who inspired me in several ways. It will not be an over-emphasis if I add that Prof. Sharma played the role of a catalyst in putting me on the path of undertaking research on the environment which shapes the man and society in several ways. I owe a deep sense of gratitude to Prof. Sharma who meticulously and critically commented on my draft of the thesis.

It is my pleasant duty to express my gratitude to many other faculty members of the school. Among them special thanks are due to Prof. P.K. Das, Dr. K.S. Jawatkar and Dr. Manoranjan Mohanty. I am also thankful to Mr. Khullar of the Centre, who helped me in several ways.

I shall be failing in my duty if I do not put on record the help and logistic support which my colleagues of the Ministry of External Affairs offered from time to time. I have been very lucky to have valuable suggestions from Mr. Salman Haider, the foreign Secretary, Govt. of India. I was lucky to have the benefit of experience and wisdom of Dr. Digvijay Singh, Ex. M.P. and formerly, Minister for Environment, Govt. of India.

Last but not the least I must put it on record the valuable help in several ways my wife rendered to me at my critical moments. She was the source of continued inspiration for successfully completing the research work.
