List of table

Table – 4.1.1. Distribution of proposed and actually studied population in selected villages.

Table – 4.1.2. Socio – demographic profile of study sample.

Table – 4.1.3. Distribution of respondents according to Haemoglobin (Hb) Percentage.

Table – 4.1.4. (A) Distribution of subjects according socio – demographic, anthropometric, nutritional and haematological variables.

Table – 4.1.4. (B) Comparison between actual intake of nutrient and recommended daily allowances (RDA) for a pregnant woman with moderate work.

Table – 4.1.5. Relation of haemoglobin concentration with various groups of age, parity, religion, food habit and income group of respondent.

Table – 4.1.6. Distribution of pregnant women according to their general condition in relation to hemoglobin (Hb) concentration.

Table – 4.1.7. Clinical sign and its relation with the hemoglobin of study sample.

Table – 4.1.8. Distribution of pregnant women according to their menstrual history and its relation with the present
Anthropometric changes in study sample at various stages of pregnancy.

Change in hematological variables as affected by the stage of pregnancy.

Distribution of population according to their food habits in relation to hemoglobin concentration.

Distribution of sample according to the availability of various food groups.

Distribution of study women according to daily average calorie, protein, iron, and folic acid intake.

Distribution of respondents based on daily dietary protein consumption and their hemoglobin level.

Distribution of respondent based on daily dietary iron intake and hemoglobin level.

Distribution of respondents based on their folic acid intake and MCV (fl).

Distribution of pregnant women according to their receipt and consumption of I.F.A. tablets.

Reasons for non/irregular consumption of I.F.A. tablets by pregnant women.

Utilization of I.F.A. tablets in pregnant women in
relation to education.

**Table – 4.3.3 (ii)** Utilization of I.F.A tablets in pregnant women in relation to parity.

**Table – 4.3.3 (iii)** Utilization of I.F.A. tablets in pregnant women in relation to age.

**Table – 4.3.3 (iv)** Utilization of I.F.A. tablets in pregnant women in relation to income group.
