ACKNOWLEDGEMENT

It is indeed a great pleasure for me to express my deep sense of gratitude, respect and appreciation for my supervisor, Dr. R.N.K. Bamezai. His sincere concern, cooperation, constant encouragement, invaluable guidance, valuable criticism and fruitful discussion guided me throughout the course of my research. It is, however, hard to enumerate here all those moments when he patiently motivated me in all my endeavours.

Realising how much I have learned and shall continue to learn from others, I consider this as a cherished opportunity to acknowledge all my teachers who have contributed in shaping my career.

I sincerely thank Prof. M. Habibullah, Prof. P.C. Kesavan, Prof. S.G. Mukherjee, the former Deans, and Prof. N.Z. Baquer, the present Dean of School of Life Sciences, for providing me with all the necessary facilities.

No words can suffice my heartfelt thanks to all the leprosy patients, their family members and the normal volunteers for donating blood without which this study would not have been possible. I am also indebted to Prof. L. K. Bhutani and his staff at A.I.I.M.S. for their cooperation, and extending help in clinical classification of the leprosy patients.

I gratefully acknowledge my thanks to Dr. A. Bamezai, Harvard Medical School, Boston; Dr. S. Ali and Dr. Raj Raghupathy at the National Institute of Immunology and Dr. S. Jameel at the International Centre for Genetic Engineering and Biotechnology for their constructive suggestions, advice and help. The gift of various antibodies from Dr. M.B. Brenner and Dr. H. Band;
plasmids from Dr. D.A. Hafler (Zurich University), Dr. F. Meyer (Harvard Medical School, Boston) and Dr. David Brod (ATCC, Maryland); and standard sequencing reaction mixtures from Dr. A. Bhattacharya, School of Life Sciences and Dr. Umesh, DST-Genetic Engineering unit, are gratefully acknowledged.

I owe special thanks to Dr. P.K. Yadav, School of Life Sciences, for showing his deep concern and giving advice for synthesis of the oligonucleotides; and Prof. R. K. Saxena, School of Life Sciences, for allowing me a free access to the FACS machine.

The sincere help extended by Shiva, Andrew, Archana and Sanjiv, for getting the thesis in this shape, is highly acknowledged. Thanks are also due to my seniors, Dr. R. Raina, Dr. Saranjit Kaur, Dr. Raghu, Dr. Malathi and Dr. S.P. Singh. I owe thanks to Arjun for his support in operating the FACS Epics XL coulter machine.

No words can express my sincere thanks to my friend, Geetanjali for offering a helping hand, especially in the hour of need. I am particularly thankful to all other colleagues of my laboratory, Alka, Nirupama, Ravinder and Anjali for being a wonderful company. Their constant cooperation and help provided a splendid atmosphere to work in. I thank Mr S.S. Pandey, Mr. Kali Ram, Mr. Sumer Singh, Mr. Ghanshyam and Mr. Joginder for their laboratory assistance.

I am also indebted to my friends Naresh, Stephen, Seema, Reema, Roopa, Shehla, Inderpal Singh, Rita, Agam, Partha and Ranjana for their friendship, help and moral support which sustained me during times of critical need.
I especially thank Mr. Saini for extending his excellent photographic skills and the CIF staff, Mr. Alexander, Mr. Khan, Mr. Sharma and Mr. Ahmad for their assistance in various ways.

I thank the University Grants Commission (UGC) for providing me with a research fellowship and Department of Bio Technology (DBT) for providing funds for the development of laboratory infrastructure.

Last but not the least, I acknowledge with gratitude the blessings, encouragement, all round support, love and affection of my parents. I wish to conclude by conveying my special thanks to my elder brother for his sincere advice, inspiration and support, which has been a source of strength all through, and my little nephew for his innocent and enchanting amusements.

(GURVINDER KAUR)
