

List of Tables

2.1	A list of chemicals used in the experimental work done	34
3.1	Parameters calculated from the J-V characteristics of reference cell along with the single as well as double layered approach cells . . .	104
3.2	EIS parameters estimated for three devices each fabricated using T, 0.5 S, 0.75 S and 1 S	113
3.3	Parameters calculated from the J-V characteristics of cells fabricated with and without mesoporous SiO ₂	114
3.4	Band gap of electrodes T, 0.5 S, 0.75 S and 1 S	114
3.5	Enhancement in absorption by the addition of mesoporous SiO ₂ at different wt% and dye loading of electrodes T, 0.5 S, 0.75 S and 1 S	125
4.1	Various properties of Ag	136
4.2	Extinction coefficients, absorption cross-sections and their % age enhancements for N719 incorporated with np-Ag _{pc} and np-Ag _{sc} . .	156
4.3	Extinction coefficients and absorption cross-section of N719 incorporated Ag nanoparticles synthesized under different CTAB concentrations.	181
4.4	% age enhancements in absorption cross-section and absorbance for N719 incorporated Ag nanoparticles synthesized under different CTAB concentrations	181
