Genesis and Objectives of the Present Study
Abbreviations and Symbols

Introduction
  Malaria: Global scenario and life cycle
  Filariasis: Global scenario and life cycle

Review of Literature: Present Knowledge
  Biochemistry of malaria and filarial parasites and application of the biochemical knowledge in chemotherapy
  Glutathione metabolism: An overview

Scope and Plan of Present Work

Materials and Methods

Results and Discussion

Chapter-I
  Characterisation of glutamate cysteine ligase from filarial worms and malaria parasites

Chapter-II
  Purification and characterisation of glutathione reductase from filarial worms and malaria parasites

Chapter-III
  Filarial and malarial GCL and GR in relation to chemotherapy

Chapter-IV
  Antimalarial efficacy of standard GSH depletors on P. yoelii infection and effect on GCL/GR activities of rodent malaria host
