ACKNOWLEDGEMENTS

I am grateful to my supervisor, Dr. Binod Khadria for his guidance, constructive criticisms and encouragement at every stage of the study. This work has benefited from my continuous interaction with him. The study would not have been completed but for his persistent perusal. Professor Tapas Majumdar, who had been my M.Phil supervisor, provided the much needed initial guidance in developing the basic framework and methodology of the study. My academic discussions with him helped sharpen many of my arguments in the thesis. I am extremely grateful to him.

Professor Kuldeep Mathur, Director, National Institute of Educational Planning and Administration (NIEPA), New Delhi showed keen interest in the study. He has been a constant source of encouragement and inspiration. I am highly grateful to him.

My numerous interactions with Professor D.N. Rao of Jawaharlal Nehru University helped me developing the regression models I have used in the study. I am grateful to him for his observations and guidance. I also have received much help from Dr. N.V. Varghese of NIEPA in refining some of my methodological arguments, especially about segmentation and empirical models for estimation of earnings functions. I am grateful to him.

The study received various types of help from many quarters. The Chief Inspector of Factories, Government of National Capital Territory of Delhi allowed me to use the ‘Register of Working Factories in Delhi’ for sampling purpose. The managers and owners of the sample firms extended their full cooperation by permitting me to interview their employees and in making available to me valuable information about their firms and employees. I am thankful to them. I am also thankful to all the employees interviewed during the study for their patience and cooperation in providing the required information.
My thanks are due to Mr. P.N. Tyagi of NIEPA for his help in the computer designing of the figures. I am also indebted to my friends Dr. B. K. Panda and Mr. P.K. Mishra for their help and support at every stage of the study.

My thanks are also due to the staff of the Central Library, Jawaharlal Nehru University, the staff of the libraries of NIEPA; Institute for Applied Manpower Research, New Delhi; Central Statistical Organization, New Delhi; Ministry of Labour, Government of India; and National Labour Institute, NOIDA for providing me with excellent library facilities.

Finally, I must also acknowledge Mr. Sudhir Dagar for typing out the manuscript in time.

(KAMALAKANTA BISWAL)
