

CONTENTS

| | Page No. |
|--|-----------------|
| CHAPTER – 1 | |
| INTRODUCTION | |
| 1.1 The Problem of Transient Stability | C1-1 |
| 1.2 Factors Affecting Transient Stability | C1-3 |
| 1.3 The Problem of Transient Stability Control | C1-4 |
| 1.4 Development on Nonlinear Excitation Controller Design | C1-7 |
| 1.5 The Unified Power Flow Controller and its Potential as a Tool for Transient Stability Improvement | C1-7 |
| 1.6 Scope of the Present Work | |
| 1.7 Organization of the Thesis | C1-9 |
| | C1-9 |
| CHAPTER – 2 | |
| SIMULATION OF POWR SYSTEM DYNAMICS | |
| 2.1 Introduction | C2-1 |
| 2.2 Synchronous Machine Model | C2-1 |
| 2.3 Model of Excitation System | C2-8 |
| 2.4 The principle of UPFC Operation and Control | C2-9 |
| 2.5 The UPFC Model | C2-10 |
| CHAPTER – 3 | |
| ROBUST NONLINEAR EXCITATION CONTROL STRATEGY | |
| 3.1 Introduction | C3-1 |
| 3.2 Power System Model | C3-2 |
| 3.3 Existing DFL Excitation Control Strategies | C3-4 |
| 3.4 Existing Methodologies for Robust Nonlinear Excitation Control | C3-6 |
| 3.5 The Proposed DFL Control Strategy | |
| 3.6 The Study System | C3-9 |
| 3.7 Simulation Results | C3-12 |
| | C3-14 |

| | |
|--|-------|
| CHAPTER – 4 | |
| APPLICATION OF THE PROPOSED EXCITATION CONTROL STRATEGY IN MULTIMACHINE POWER SYSTEM | |
| 4.1 Introduction | C4-1 |
| 4.2 Existing Decentralized Controller | C4-2 |
| 4.3 Prospect of the Proposed DFL Excitation Controller as Robust Decentralized Controller in Multimachine Power System | C4-5 |
| 4.4 The Study System | |
| 4.5 Simulation Results | C4-8 |
| | C4-10 |
| CHAPTER – 5 | |
| COORDINATED CONTROL OF EXCITATION AND UPFC FOR TRANSIENT STABILITY ENHANCEMENT | |
| 5.1 Introduction | C5-1 |
| 5.2 UPFC Control Strategy | C5- |
| 5.3 The Study System | C5- |
| 5.4 Simulation Results | C5- |
| CHAPTER – 6 | |
| CONCLUSION | C6-1 |
| APPENDICES | |
| APPENDIX – I | A-1 |
| APPENDIX – II | A-4 |
| BIBLIOGRAPHY | B1 |
