List of Figures xi

1 Introduction 1
   1.1 Plasma: The fundamental form of the Universe 1
   1.2 Nonlinearity: It’s reality 2
   1.3 Nonlinear waves and wave breaking in plasma 4
   1.4 Phase-Mixing: A potential cause of wave-breaking 5
   1.5 Wave-breaking: Its importance in plasma based particle accelerator and other applications 7
   1.6 Lagrangian description: An useful way to treat the convective nonlinearity 8
   1.7 Motivation for studying nonlinear wave dynamics in relativistic plasmas 11
   1.8 Thesis Outline 12

2 Nonlinear electron oscillation in finite temperature plasma 14
   2.1 Introduction 14
   2.2 Basic Equations 15
   2.3 Nonlinear Analysis 17
   2.4 Approximate Solution 22
   2.5 Summary 26
Contents

3 Lower Hybrid Oscillation in Cold Viscous Plasma 28
  3.1 Introduction ........................................... 28
  3.2 Basic equations ....................................... 29
  3.3 Numerical results ..................................... 31
  3.4 Summary ................................................ 32

4 Phase mixing of upper hybrid oscillations in a cold inhomogeneous plasma placed in an inhomogeneous magnetic field 35
  4.1 Introduction ........................................... 35
  4.2 Basic Equations ....................................... 37
  4.3 Linear Analysis: Mode coupling as a signature of wave-breaking ....... 38
  4.4 Nonlinear Analysis ..................................... 40
  4.5 A brief review on Homotopy perturbation method ..................... 43
  4.6 Approximate Solution ................................... 45
  4.7 summary ................................................ 50

5 Breaking of upper hybrid oscillation in relativistic plasma 52
  5.1 Introduction ........................................... 52
  5.2 Basic Formulation of Relativistic Plasma ...................... 54
  5.3 Formulation of Relativistic Upper Hybrid Oscillation .............. 60
  5.4 Solution ................................................ 62
  5.5 Analysis of exact solution ................................ 66
  5.6 Weak Relativistic Limit .................................. 69
  5.7 Summary ................................................ 73

6 Nonlinear Alfvén Wave 75
  6.1 Introduction ........................................... 75
  6.2 Basic Equations to describe dispersive Alfvén waves ................. 77
  6.3 Linear mode ............................................ 82
  6.4 Nonlinear analysis ...................................... 82
  6.5 Analysis by Lagrangian mass variable ........................ 84
  6.6 Weak amplitude nonlinear wave: ................................ 85
  6.7 Nonlinear solution by separation of variable method ............... 86
    6.7.1 A First Integral .................................... 92
    6.7.2 Analytical Support of Numerical Results .................. 93
  6.8 A possible application for magnetic star formation: ............... 94
  6.9 summary ................................................ 98

7 Summary ................................................ 100
  7.1 Summary of the thesis ..................................... 100
Contents

7.2 Scope for future .................................................. 103

Appendix A Approximate solution of nonlinear Alfvén wave 106
Bibliography .......................................................... 118
Bibliography .......................................................... 118
