The satisfaction that accompanies the achievement of this voyage would not be complete without the mention of the people who made it feasible, that consistent guidance and encouragement crowded my efforts with success. I consider it my privilege to express my sincere gratitude and respect to all those who have been part of my journey.

This thesis would not have been possible without the kind advice and support of my supervisor Dr. Rukhsana Chowdhury, a prime source of my inspiration since February, 2007 when I had started my Ph.D assignment. I owe my deepest sense of gratitude for her motivations, and for always believing in me and encouraging me in my desperate moments of research, and also for sharing her enormous knowledge. Her guidance in my research, carrier and life will have a great influence on my future endeavours and I always ought to have special thanks for her patience, enthusiasm, and never-ending support.

It is a great opportunity for me to express my deepest gratitude to the Director of IICB Prof. Siddhartha Roy for allowing me to pursue my research work. I am indebted to Dr. Chitra Dutta and Dr. Pradip Dutta for their generous help whenever asked for. I am thankful to Dr. Hemanta K. Majumder, Dr. Syamal Roy, Dr. Rupak, K. Bhadra, Dr. Keya Chaudhuri, Dr. Kunal Ray, Dr. Sushanta Roychowdhury, Dr. Pijush K. Das and Dr. K. P. Mohankumar for allowing me to use their lab facilities and being excellent motivators in their own right. I also, appreciate the efforts of Dr. Siddhartha Majumder, Head, HRG, Mr. N.C. Ghosh, head, library and documentation division, other official staffs for assistance and support in official matters and particularly library staff of IICB for providing me an excellent work environment during the past years.

I am grateful to Prof. J.J. Mekalanos, Harvard Medical School, Boston, Mass., Dr. K.E. Klose, University of Texas Health Science Center, San Antonio, Texas and Dr. A. Camilli, Tufts University, Boston, Mass. for their kind support whenever I needed.

I also would like to give enormous thanks to Dr. Kalidas Paul for his suggestions and excellent technical support. His experimental input and essential discussions enormously contributed to our work report and strengthened my thesis greatly.

I feel blessed to have wonderful lab mates for creating an affluent scientific ambiance that made a very enjoyable environment setting. Special thanks go out to my friends and colleagues, Amit Baidya, Raghvan, Epshita, and Subhra for their unwavering support on a daily basis and at some critical moments as well as frequent discussion on interesting problems during our comprehensive lab meetings and revising the work that has gone into this thesis. I got enormous help from Saurabh Bhattacharya, a wonderful and
energetic youth of my lab. I would like to mention the name of young people Sreejana, Chirantana, and Afshan for their cooperation and lively presence. It gives me immense pleasure to express regards to wonderful seniors Tanushree Das, Abha Bhagat, Sanjib Banerjee, Arpita Chatterjee, Sohini Chaudhuri, Amalendu Ghosh, and Durba Bandopadhyay for giving lot of inspiration, excellent technical support, and exchange of scientific outlooks. I would like to extend my thanks to other past and present labmates and the members of Infectious Diseases and Immunology Division, and Human Genetics and Genomics Division and the friends of IICB for their cooperation and help rendered in the lab whenever needed.

I had the pleasure to provide guidance and work with many summer students, especially Bharat and Sourabh Samaddar, who did a part of my project as their post graduation dissertation work. Their simple but logical queries helped me understand my work to a great depth. I would like to thank them all.

I feel a deep sense of gratitude for all my teachers, present and past for enriching me with their knowledge and wisdom.

I would like to thank the support by research grants from the: Council of Scientific and Industrial Research (CSIR) and Indian Council of Medical Research, Government of India.

Finally, I would like to acknowledge the creators of the search engine Google™. Searching for anything was just fun with Google - be it scientific or non-scientific. I also acknowledge curators of all public domain servers like NCBI, TIGR etc.

Last but not least, I would not accomplish this journey without constant and incredible support of my parents, brother Sumit, and his wife Aparupa, they deserve special thanks and acknowledgement, perhaps, cannot be expressed by words. The trust and the confidence that my parents had in me was the motivating factor behind all my achievements. I am grateful to Suman, not only a friend but more of a brother, for his tremendous support and being with me. Most importantly, I am indebted to my wife Anwesha and little angel Anwita for filling beautiful colours in my life and making it beautiful, smooth, pleasant and happy. Anything I express about their help, cooperation and sacrifice would be under representation of facts.
