Acknowledgments

It would not have been possible to complete this doctoral thesis without the help and support of the special people around me, to only some of whom it is possible to give particular mention here.

First of all I would like to sincerely thank my supervisor, Dr. Sagartirtha Sarkar, Associate Professor, Department of Zoology, University of Calcutta, for his guidance and support throughout the last five years and especially for his confidence in me. Without his advice and unsurpassed knowledge of Molecular Cardiology it would have been impossible for me to carry out this beautiful research work. Therefore, I am deeply indebted to my supervisor whose help, stimulating suggestions and encouragement helped me in all the time of research and writing of this thesis. Sir, I thank you from the bottom of my heart for being my mentor during this exciting journey.

I shall remain obliged to Dr. Mamta Chawla Sarkar, NICED, Kolkata for providing me with all the necessary kits, chemicals and infrastructural facilities whenever I needed. I have also benefited a lot from her valuable inputs during preparation of my manuscript of paper.

My sincere gratitude to Prof Samir Banerjee for his permission of doing my Ph.D. work in this Department as I am a student from Microbiology (M.Sc.).

I thank the Department of Zoology, University of Calcutta, for the infrastructural facilities provided to me for my research work.

I would remain indebted to my senior lab mates Arunachal da (Dr. Arunachal Chatterjee), Saiful Da (Dr. Saiful Anam Mir), Anasuya Di (Dr. Anasuya Gupta) and Kanchan Da (Dr. Kanchan Pathak) for their valuable suggestions throughout my Ph. D. tenure. They taught me all the tricks and techniques that were required for my work.

I am thankful to my present lab friends— Santanu Da, Arka, Kaberi, Aramita, Ritwik, Trisha, Preeta and Emeli for their assistance during my Ph.D. tenure. We share a bond that goes far beyond experiments and studies. Thank you all for being with me in the last five years and making it one of the most memorable phases in my life.

I extend my thanks to all the members of Zoology Department, University of Calcutta and Virology Lab, NICED, Kolkata for helping me during some critical experiments and giving valuable inputs.
I am deeply obliged to NIN, Hyderabad, India for supplying me Balb/c mice for my scientific research. A special word of thanks to all those tender lives I had to sacrifice during the course of my work. May the soul of those mice, rest in peace.

I thank the present and all the former Heads of Dept. of Zoology, University of Calcutta, for allowing me to use the infrastructural facilities during my working tenure.

I express my sincere gratitude to the present and former Conveners of Ph.D. committee, Dept. of Zoology, University of Calcutta, for their suggestions and arranging the procedures during my work.

A special thanks to Tarun Keswani for his assistance in making critical fellowship bills and dealing with tough college street problems for RFSMS fellowship.

I thank Prodipta for providing me suitable condition for doing my research work peacefully. I am also grateful to my friends Santanu, Saswato, Sarbo, Parika, Madhu, Soumita, Moumita, Elena, Bisakha and Sonali for their encouragement and patience during the last five years.

Finally, this thesis would not be possible without the unconditional love and support of my parents. I suffered an irreparable loss when I lost my father last year but he and my mother will remain the biggest reasons behind whatever I achieve in my life. I thank my sister for giving me support and encouragement.

The financial assistance provided by the University Grants Commission-Research Fellowship in Science For Meritorious Students (UGC-RFSMS) for my fellowship and the support provided by CSIR (Grant number 37(1393)/10/EMR-II), DST (Grant number F.No.SR/SO/HS-100/2009) and UGC (Grant number F.No.39-108/2010 (SR) is greatly acknowledged.
