Acknowledgements

I still remember that bright August morning in 2008 when I stepped into Dr. Gopal Chakrabarti’s lab as a research fellow. Though it wasn’t my first visit to the lab but this time I was a bit nervous since now I was accompanied by my anxiousness, my uncertainties and myriads of expectations. But today when I recollect, I feel extremely fortunate to take that decision which introduced me an immensely enjoyable journey, filled with lessons of science, friendship and life itself. Yet, like all good things in life this joyride too had to come to an end. Today, as I sit writing this page, many names come rushing to my mind in warmth and gratitude for standing by me all along, bracing my drooping spirit when work threatened to overtake emotions. As the ‘terminus’ is approaching, I think this the best moment to express my appreciation to all those wonderful people around me who have left their mark in my work and life.

First and foremost, I would like to express my sincere regards to my supervisor Dr. Gopal Chakrabarti for his untiring cooperation. His valuable suggestions, boundless optimism and continuous inspiration have encouraged me through my tenure in the Department of Biotechnology, University of Calcutta. Not even an iota of the work would have been possible without his active guidance virtually at every step, who for me acted at times as philosopher and friend. Association with him has left an indelible mark on my life and career.

I am also indebted to Prof. Dhrubajyoti Chattopadhyay, Department of Biotechnology, University of Calcutta for his stimulating discussions and active participation in my research work. His wisdom, visions and advice has been a constant support since my M.Sc.

My gratitude is also due to Dr. Suvendra Nath Bhattacharyya, CSIR-IICB for his suggestions, thought provoking discussions and encouragements to my research and for providing me with the luciferase reporter plasmids for luciferase assay.

I am deeply beholden to Prof. Maria Kavallaris, Australian Centre for NanoMedicine, The University of New South Wales, Sydney, Australia for her valuable suggestions during the course of my research.

I am fortunate to have had a stimulating faculty at the Department of Biotechnology, University of Calcutta. Prof. Indu Bhushan Chattopadhyay, Dr. Koustubh Panda, Dr. Rajat Banerjee and Dr. Anindita Seal have been great teachers and were always ready to lend a hand whenever it was needed. I also express my sincere thanks to all faculties of the
Department of Biochemistry and Department of Microbiology for being so nice to me and providing me all possible facilities during my research.

I thankfully acknowledge Departments of Biotechnology and Biochemistry, University of Calcutta for infrastructural support and DBT-IPLS programme, for instrumentation facilities. I would also like to acknowledge Department of Biotechnology, Government of India and DST- PURSE programme, University of Calcutta for providing me research fellowship.

Apart from the faculties, I am fortunate enough to have great colleagues and seniors both in the lab and in the department. Bipul Da, Diptiman da, Santanu Da, Supratik Da, Kaushik da, Tridib da and Arindam da have been kind to extend a warm hand whenever I needed them. Arnab, Surela, Debashish, Satabdi and Debabrata deserve a special mention for their active help during my work, without them this thesis would not have reached its culmination.

I would like to express my deepest sense of gratitude to my parents, especially to my father, Late Sri Gurupada Chatterjee for his unconditional love and continuous support during this tenure. My father has always been the biggest inspiration in my life and today when I’m winding up my work, he is not present physically but I know it’s his blessings and love which helped me to achieve the goal. I would like to thank my elder sister, Dr. Arunima Chatterjee for her tremendous mental support and lots of blessings. I am also thankful to my brother-in-law Dr. Rudraprosad Chakraborty for sharing his vast knowledge and experience with me.

Last but not the least I would also like to thank my beloved wife Mrs. Anasua Chatterjee, Diya, for all her love, support and especially for bearing with me during the tough times of my doctoral career. Her innocence and ever smiling face always motivated me during ups and downs of my Ph.D research tenure.

August, 2014

Abhisek Chatterjee
Senior Research Fellow
Department of Biotechnology
University of Calcutta
Kolkata, India
