Acknowledgements:

At this memorable moment, I would like to express my gratitude to my Ph.D. supervisor Prof. Dhananjay Bhattacharyya for his continuous support and guidance throughout my research work. He not only gave me valuable suggestions, but also worked alongside me with the same earnestness. I am extremely thankful to him for sharing his knowledge with me.

I am thankful to the ex-Directors, Prof. Bikash Sinha, Prof. Milan K. Sanyal and the present Director, Prof. Bikas Chakraborty, of Saha Institute of Nuclear Physics, for providing me the ground to flourish my work.

I am sincerely grateful to Prof. Dipak Dasgupta, the Head of Biophysics Division, Saha Institute of Nuclear Physics, who has allowed me to avail all the facilities for working freely in an extremely well-guided and disciplined, yet friendly, atmosphere.

I formally acknowledge Dept. of Atomic Energy, Govt. of India, and Dept. of Biotechnology, Govt. of India, for financial support of my research. I also acknowledge the computational facilities of Centre for Applied Mathematics and Computational Science (CAMCS) and Biophysics Division, Saha Institute of Nuclear Physics, and Bio-informatics Resources and Application Facility (BRAF), Centre for Development of Advanced Computing, Pune. Without these facilities, performing the long MD simulation runs would have been a difficult assignment.

I am thankful to Prof. Manju Bansal, Molecular Biophysics Unit, Indian Institute of Science, Bangalore, and her group members, especially Senthil Kumar Kailasam for their scientific assistance. We have worked together on stacking interaction in DNA and RNA and co-authored two articles.

I am grateful to all my teachers during my Post-M.Sc. coursework, especially Prof. Samita Basu and Prof. Rahul Banerjee of this institute for support and friendly assistance since my initial days in research.

It is a pleasure for me to remember all my friends and colleagues during different phrases of my research tenure. I am particularly obliged to my seniors Dr. Debashree Bandopadhyya and Dr. Subrasankar Roy for their valued guidance. My special thanks for my senior Dr. Sudipta Samanta and my colleague Manas Mondal for their constant support and encouragement in both research and personal problems. I am indebted to my beloved labmates – Sangeeta Kundu, Sukanya Halder, Swati Panigrahi, Angana Ray and Debashish Mukherjee – for always helping me out of critical situations with their supports and suggestions, both in personal and professional life. I will always treasure the
companionship of my Post-M.Sc. batchmates – Sukanya, Sutapa, Swati, Brotati, Moumita, Sudip, Jayeeta and Kamalika.

Biophysics Division and later on Computational Science division has been a great place to flourish my work, thanks to the friendly milieu maintained by its scientific and non-scientific members. I must thank Sudipta Pal, Suman Pradhan, Shibojyati Lahiri, Parijat Majumdar, Saptaparni Ghosh, Amrita Banerjee, Shreyosi Dutta, Pritha Bhattacharjee, Avinanda Banerjee, Pradipta Kundu, and Manindra Bera, for making my experiences really memorable.

I sincerely thank my family for always being there with me through all successes and failures. I want to acknowledge my indebtedness to Samiran for his tireless company and encouragement in all odds. I am also thankful to my beloved sister Bandita, a biology enthusiast for all those fun-filled discussions. Also, there are many others, who by their co-operation and support have made this success achievable. Lastly, I express my academic indebtedness to all the authors whose works I have cited in this thesis.
