Acknowledgement
I would like to express by profound and sincere gratitude to my supervisor, Dr. Nabendu Sekhar Chatterjee, Scientist E, Division of Biochemistry, National Institute of Cholera and Enteric Diseases, Kolkata, India for his motivation, encouragement, untiring help and constant guidance throughout my thesis work tenure. Throughout the PhD period he has not only been my guide but also a very good teacher who has supported me with his patience and knowledge whilst allowing me space to work in my own way.

I express my sincere gratitude to Dr. G. Balakrish Nair, Ex-Director; Dr. Shekhar Chakraborty, Ex- Director-in-Charge; Dr. Manoj Kumar Chakraborty, Director-in-Charge, NICED, Kolkata, India for giving me the platform to work.

I am grateful to Dr. Kalyan Kumar Banerjee, Scientist F, for his insight and important suggestions regarding my work. His valuable advice has helped a lot to address the topic of my thesis work.

Its my privilege to express my regards and indebtedness to Dr, Sun Nyut Wai, Department of Molecular Biology, Umeå University, Sweden for providing the pCVD442 suicide plasmid, that helped me a lot to construct the mutants that required extensively throughout my thesis work. My sincere thanks to Dr. Elluri Sridhar for helping me construct the mutants.

I am very thankful to Dr. Hemanta Koley for his help, suggestion and guidance regarding the animal experiments. My sincere thanks to Dr. Dhirra Rani Saha for the histological studies. I am also thankful to Dr. Santa Sabuj Das, Dr. Tapas Biswas, Dr. Amit Pal, Dr. Mamta Chawla sarkar, Dr. Ranjan Nandi for their constant encouragement.

The technical assistance of Mr. Rakesh Naik, Madhumita Lahiri and Chandrima Banerjee deserves a special mention.

My special thanks to Dr. Sagar Scharya for his help in animal experiments. I am also grateful to my seniors Dr. Rudra Bhowmick, Dr. Avishek Ghosal, Dr. Avishek Ghosh, Dr. Subrata Sabui, for their constant help, support and cooperation. Dr. Shiladitya Chattapadhaya, Dr. Pallavi Banerjee, Dr. Dipanjan Dutta also deserve a special thanks for their support whenever I required. I convey thanks to my laboratory colleagues Sreerupa Ganguly, Amarshi Mukherjee, Anusuya Debnath, Sudipto Mandal, Dr. Epshita Chatterjee and Rhishita Chourashi for being always co-operative with me. A special thanks to Ritam Sinha and Drhrubajyoti Nag for their help in animal experiments. I also thank to my colleagues Dr. Mukti Naik, Rima Tapadar Ghosh, Nirmalya Dasgupta, Sayan Das, Sambit Roy, Taniya Golder, Asim Biswas for their help.
The love and support of all my friends especially Nandana Das, Soumi Banerjee and Sandipa Roy deserves a special mention for their encouragement and inspiration throughout the entire course of my research career.

I express my heartfelt and deepest gratitude to my parents Mr. Arun Kumar Mondal and Mrs. Sikha Mondal for everything. Their sacrifice, encouragement, guidance, constant support, extraordinary patience, best wishes and blessings helped me to reach this point. A special thanks and love to my sisters Ipsita Mondal and Jayeeta Mondal for making my life livelier.

Finally my heartiest thanks to GOD for blessing me with such nice family, friends, colleagues, teachers and most importantly a friendlier supervisor without whose help this thesis work would not have been completed or written.
