Contents

Exploration of *Plasmodium falciparum* genome database

Part I: Identification and characterization of novel drug targets

1.0 Introduction

2.0 Review of literature
   2.1 Degradation of cellular proteins
   2.2 Protozoan parasites and HslUV system
   2.3 Proteasome inhibitors
   2.4 Proteasome inhibitors as antimalarials
   2.5 History of malaria
   2.6 Life cycle of malaria parasite
   2.7 Current situation of malaria

3.0 Materials and methods
   3.1 Materials
   3.2 Methods

4.0 Results
   4.1 Theoretical prediction of 3D structure
   4.2 Identification of proteins that lack homologs in host system
   4.3 Identification and cloning of *P. falciparum* hslV gene
   4.4 *In vivo* characterization of PfhsIV gene
   4.5 Analyzing the activity of PfhslUV system *in vivo*
   4.6 Silencing of PfhslV gene expression by RNAi
   4.7 *In vitro* characterization of PfhsIV protein
   4.8 Activity assay for PfhsIV proteins
   4.9 Identification and characterization of *P. falciparum* hslU gene
   4.10 Assaying the ATPase activity of recombinant PfhslU protein

5.0 Discussion

6.0 Summary and conclusion

7.0 References

Part II: Computational analyses of non-coding RNAs
