

Acknowledgement...

The start of a PhD is a voyage into the vast expanses of an ocean, in a path never completely traversed before by anyone, to explore the unknown with a MAP (plan of research), a LEADER (guide) –an experienced traveler who has already made few such expeditions and some fellow, equally inquisitive co-travelers who have also set out with their boats. As my journey approaches an end, I would like to thank all the people involved directly and indirectly with my journey. I appreciate their presence and thank them for helping my boat find the shores.

Over six years of travel with mixed experiences of joy and sorrow, success and despair have changed me from the person I was, profoundly. It has been a huge learning experience for most of which I am indebted to my mentor **Dr Sumita Sengupta** (Assistant Professor, Department of Biophysics, Molecular Biology and Bioinformatics, University of Calcutta) who believes in training her students to become “scientists and not technicians”. I am especially thankful to her for giving me the independence to choose and develop my project, helping me build my analytical skills, for teaching me the art of positivity, handling stress with patience and the courage to believe in myself. She also reminded me from time to time of course why I “should listen to experienced people.” Besides professional learning I am also very indebted to her for the day to day humanitarian lessons I imbibed from her. She further enforced the belief I grew up with that it is most important to be a good human being.

I am also very grateful to all the other faculty members of my department namely **Prof. Chanchal Kumar DasGupta** and **Prof. Uma DasGupta** (ex-faculty) for their support, **Prof. P.K Sengupta** (member of PhD committee) for approving of my thesis and for his amazing course work classes, **Prof. Abhay Sankar Chakraborti** (convenor of PhD committee) for his help and guidance with thesis pre-defence, **Prof. Sarmishtha Raychaudhuri** for her excellent planning and co-ordination of a very intensive PhD course work and the National symposium at Vishwabharati University. **Prof. Subhasis Mukherjee** and **Prof. Shukla Ghosh** for their course work classes, **Dr Anshuman Lahiri** for his extensive support to help me obtain travel grant from the University of Calcutta for attending a course-work in Paris, **Dr Sudip Kundu** for supporting all the scholars of our department in their academic and non-academic ventures (like organization of cultural programs) and **Dr Runa Sur** for her constant encouragement, extensive help and co-operation in all our endeavors.

I express heart-felt gratitude towards **Dr Tapas Sengupta** (Associate Professor, IISER-Kolkata) for his enriching scientific inputs and for providing us with plasmid constructs to facilitate our research. I sincerely thank **Ms Monalisa Mondal** and **Dr Partho Sarothi Roy** for helping and allowing us to use their polysome profiling facility. I am indebted to **Prof Krishanu Chakrabarti**, **Dr Anirban Siddhanta** and **Dr Sanjoy Ghosh** for various reagents or infrastructural assistance received from them from time to time. I am also very grateful to **Dr Jayanto Mukhopadhyay** for allowing us to use his phosphorimaging facility.

ACKNOWLEDGEMENT

The people without whom this journey would have been difficult are our office staff, (late) **Jibon da, Tushar da, Sourav da** and **Niladri da** and **Ratan da**, those who have always helped us in their own ways so that we could work comfortably. Here I would specially mention **Ashok da** for all that he has done for us. I will definitely miss his “tea” for years to come!!

Inspite of spending the major hours of the day at the laboratory, the people who would still make me miss lab on holidays are my labmates. I am more than thankful to them for making our workplace as comfortable as home and like a family. We have been together through thick and thin, helping each other overcome our problems and it is them that I would miss most. From the seniors from whom I have learnt to work namely **Kamalini di, Pritha di** and **Sucharita di**, to those with whom I have learnt together **Srimoyee** and **Soumasree** and finally to those who are learning from me and vice-versa **Aritri, Sayantani, Trina** and **Chitra**, it has been wonderful. I am indebted to Sucharita di and Soumasree for their independent contributions to my research. I also especially acknowledge Srimoyee’s presence through my very difficult times.

I am also very thankful to all the project students who have worked with me from time to time enriching my work namely, **Amurto, Akash, Samares, Poulomi, Srabasti, Benika Swagata** and **Anoushka**. I would specially thank **Amurto** for his studies on M-FOLD structure predictions. I also appreciate the presence of all the past and present research scholars of our department who have helped me in various aspects at different times. I would specially mention, **Debashish da, Gargi di and Papai di** for their cooperation during the early years of my work, **Pratik** and **Mandar** for helping me run my Real Time PCRs. Some friends also require special mention here. I am very thankful to **Dibya da, Koushik da, Rajarshi, Shantanu** and **Subham** for their help.

To acknowledge some people, words of gratitude are not enough; such are the members of my family. My parents have always been my inspiration and strength. They have always stayed by me even when I have failed them. My husband and soul-mate is another such person who cares for my dreams, cooperates and compromises so that I can pursue my passions while enriching me with his scientific inputs. I take this opportunity to thank and apologize to them for all those times that I have lost patience, been restless and have not prioritized their needs over my work. I am also very thankful to my grandmother (**Didu**), **my parents in law**, sister (**Didi**), brother in law (**Rajada**), neice (**Nanu**), uncle (**Mejomama**) my entire “**mamabari**” and my teacher **Lt. Dr Debabrata Chaudhuri** for their love and unwavered support. Inspite of trying to prepare a comprehensive list I am sure I have missed out many important people or have not been able to mention some by name. I apologize and sincerely extend my gratitude to all of them.

Senior Research Fellow,
Department of Biophysics,
Molecular Biology and Bioinformatics,
University of Calcutta.

Alina Chakraborty
