ACKNOWLEDGEMENTS

The late Dr. R. S. Phadke under whom I joined for the research work guided me in the initial stages of the present investigations and took keen interest in my studies. Dr. Phadke unfortunately passed away after a short illness. I am indebted to him for his guidance and advice.

Dr. D. S. Datar, Honorary Professor and Head, Department of Chemistry, Maharashtra Association for the Cultivation of Science Research Institute has guided me further in carrying out the investigations. It has been only due to his constant interest and encouragement that I could complete my work. I record here my sincere gratitude to him for his guidance to me.

I am obliged to Dr. C. V. Viswanathan, Lipid Research Laboratories, Pune for his valuable guidance in wax analysis. I am also thankful to Shri S. G. Shende, Ex Director, Agricultural Institute, Mahabaleshwar for his guidance in fabrication of equipments.

I wish to express my grateful thanks to the Khadi & Village Industries Commission, under whose auspices I have carried out field and laboratory investigations in my official capacity as a member of the staff of the Central Bee Research Institute, for permitting me to continue my studies and incorporate the work in the thesis.

I am thankful to the Director, Maharashtra Association for the Cultivation of Science, Research Institute, Pune for
providing the laboratory and other facilities to conduct the Ph. D. work.

I thank sincerely Dr. G. B. Deodikar, Honorary Scientific Adviser for Beekeeping, Khadi & Village Industries Commission and Director, Maharashtra Association for the Cultivation of Science, who has initiated me into the research on honeybees. He has been a constant source of encouragement and guidance.

To Shri C. V. Thakar, Director, Beekeeping Industry, Khadi & V. I. Commission, I am grateful for his constant encouragement, valuable suggestions and help from time to time.

It would have been very difficult for me to complete my work without the assistance of my colleagues at the Central Bee Research Institute, particularly Mrs. K. S. Nair, Shri D. M. Wakhale and Dr. B. Ramesh. Besides Dr. K. K. Kshirsagar and Dr. M. C. Suryanarayana and Mrs. Seethalaxmi wholeheartedly extended their cooperation and help at various stages of work. Shri D. B. Mahindre, Shri S. R. Salvi, Shri K. Chandran of the Regional Bee Research Centre, Srinagar, Pathankot and Kodaiandal respectively, promptly supplied the experimental material. I acknowledge with thanks all this help from my colleagues.

I am thankful to (1) the Indian Standards Institution for inviting me to act as a member of Beekeeping Equipment Subcommittee and Member-Convener of the Honey and Beeswax Subcommittee, (2) the Ministry of Health for inviting me to work
on the Panel of Experts to consider the revision of standards for honey under Prevention of Food Adulteration Act, and (3) to the Agmark Organization for inviting me to work on a collaborating study, which gave me opportunity of exchanging views with other members of the Committee on various problems of the beekeeping industry.

I am thankful to the Department of Chemistry, University of Poona for providing me the facilities of UV spectral analysis, the Agricultural Chemist, Government of Maharashtra for allowing use of Klett Summerson Colorimeter and the National Chemical Laboratory, Pune for providing the facility of IR spectral analysis.

I wish to mention specially that Shri D. N. Nagpure did excellent job of art work and photography and Shri S. D. Balsare neatly typed the thesis in very short time.

Maharashtra Association for the Cultivation of Science Research Institute, Law College Road, Pune 411 004
