FIGURES

2.1 Typology of Hazards
2.2 Natural Disaster Typology based on origin
2.3 Natural Disasters classified as Exogenic, Endogenic and Anthropogenic.
2.4 Natural Disaster Typology based on predictability
2.5 Natural disaster typology based on-set period.
2.6 Natural Hazards classified based on intensive passive and compound class.
2.7 The impact & natural disasters with continent -wise 1969-93
2.8 Major Natural disasters around the world 1969-93
2.9 The trend of Natural Disasters caused deaths and injuries 1967-90.
2.10 The trend of major disasters in South Asia.
2.11 The trend of Earthquake problem.
2.12 The trend of Earthquake deaths between developed and developing countries.
2.13 Lives Lost in some Major Earthquake in South Asia
2.15 The earthquake mitigation effort in developing countries and developed countries
3.1 Earthquake Risk Assessment and management : A conceptual framework.
3.2 Phase of Disaster Recovery
3.3 Earthquake disaster Mitigation Measures.
3.4 Factors influencing Disaster management Activities.
4.1 Epicentres of earthquakes in and around India.
4.2 Epicentre of Maharashtra Earthquake.
4.3 Seismicity in the peninsular India is related to trans current faults.
4.4 Faulted terrain of southern India parts of the deep long faults are active and Seismogenic.
4.5 Rift Valley possibly fitted with proterozoic and Gond Wana Sediments underneath the thick pile of lavas of the Deccan volcanic province.
4.6 Map showing principal lithological groups.
4.7 Seismic zoning map of India.
4.8 Death, Injury and Damage pattern of Maharashtra Earthquake
4.9 Natural Disasters management and Administrative Setup in India.
4.10 The organisational setup of Relief Division of DAC.
5.1 Earthquake Disaster in California
5.2 Location of Northridge Earthquake
5.3 Impact of Northridge Earthquake.
5.4 Federal Emergency Management Agency Responsibilities.
5.5 State Agencies with Emergency management responsibilities
5.6 State Government’s Disaster Responsibilities.
5.7 Disaster declaration process.
5.8 Seismic Map
5.9 Seismic zones and zone 4 in California.
5.10 NEHRB Program Elements and Responsible Activities
5.11 National and State mitigation program.
5.12 Seismicity of the United States 1899-1990
5.13 Earthquake Fault Lines
5.14 Proposed Federal Responses System Planning Structure
5.15 Proposed Transition Plan

APPENDICES

II Links leading to reduction in casualties.
III Types of Socio-economic imparts and Adjustments to an Earthquake Prediction.
IV Components of Earthquake Disaster Mitigation Measures.
V A theoratical Relationship Between Risk Management in Natural Hazards.
