the compelling desire to serve the Lord through his devotees with some of our knowledge and (ii) for suggesting that Dr. N. Venugopalacharyulu, M.A. (Maths.), M.Sc. (Stat.), Ph.D. (I.I.T. – Madras), Department of Statistics should be brought in as the other supervisor to handle this formidable task under an inter-disciplinary programme. In fact, with his watchful eye, the Professor has always been shaping up my career in this University. I am at several times inspired by his inimitable leadership and patronising qualities. No words of mine could, I am sure, be able to give a full expression of my sense of thanks and indebtedness to my beloved guide.

Tacitly, the prominence of my other supervisor, Dr. N. Venugopalacharyulu in connection with my work, is already brought out in the above para. If I may venture to put forth my honest feelings of sincere gratitude, high admiration and deep reverence to Dr. N. Venugopalacharyulu, I may perhaps fulfil the task in a sort of negative manner. I have only heard of the stringent, really top-level dedicatedness and hard-working qualities that are demanded when one works with a vigorous, fast thinking, highly intuitive research guide. I must admit that I suffered every bit of this at every second, experiencing these sweet pains all along my long hours of research effort with my exacting,
highly imaginative and rigorous supervisor, Dr. N. Venu-
gopalacharyulu’. The qualities, lessons, subtle manipula-
tive methods and the art of interpretations, I learnt from 
him constitute too long a list for reproduction here. I 
fervently hope to nurture these many nice things in a 
sustained manner during the rest of my teaching and research 
career.

Prof. S.K. Srinivasan, I.I.T., Madras has made 
several suggestions on the plan of work and simulation 
model during his patient discussion with us. I am deeply 
indebted to the great Professor.

Prof. V. Radhakrishnan, Matscience, Madras has all 
my rich praise and respectful thanks for his valuable dis-
cussions that went a long way in clarifying my own thinking 
process. Later, his encouragement stimulated me for a fast 
completion of this work.

Prof. M.N. Gopalan, I.I.T., Bombay, encouraged us 
by providing a platform to present our effort at the II 
ISTPA Conference and later by bringing out our work in the 
proceedings. My sincere thanks are due to the Professor.

I must thank the Board of Editors, Journal of 
Industrial Engineering for publishing our work in two 
papers and further for encouraging us by awarding a silver 
medal (as best case-study paper in 1979) to one of the papers.
The other several works in this thesis, doubtless, could not have been completed all by myself alone. Thus, my sense of high appreciation and thanks go to the following good friends, colleagues and other technical persons:

Firstly Dr. V.V. Muniswamy, Dr. B. Swamy, and Dr. G.S. Krishna Murthy (all at I.I.T., Madras), now with S.V.U.Engg. College, helped me through the computer work. Secondly, Mrs. M. Meenakshi Bai, Head, Lept. of Statistics and Maths., S.V.Agricultural College, Tirupati has always been sparing her hours ungrudgingly in the discussions at a theoretical level in connection with the last chapter. In addition, I must record my thanks to her for putting up with all my demands for discussions even at odd hours, reflecting her immense love for academic activities.

The other co-research scholars: Dr. K.L.A.P.Sarma, Sri K.V.R. Reddy and Sri Y.K. Reddy, Dept. of Statistics, S.V. University, have helped me a lot in computational work for which I have all my thanks to them.

M/s. C. Eswara Reddy, P. Prakasam and L. Sree-ramulu, my former students deserve all my praise and pats for helping me in the collection of the massive data.

M/s. D. Venkatachalapathy, for his fast, efficient and stylistic typing, P.S. Ramakrishnudu, for his lovely
sketches, V.V. Bhaskar (T.V. Press) for the excellent get up of the final form of thesis and Muniraju, for top-grade secretarial assistance, have my immense praise.

I conclude with my respectful acknowledgement of thanks to the two great Institutions : S.V. University and the T.T.D. for according all the necessary permissions for a successful prosecution of this work.

Lastly, I thank my family members: Smt. Gowri, my son and my two daughters for judiciously keeping away from me during some ordeous hours of my struggle with my papers.
