

## LIST OF TABLES

<b>Table No.</b>	<b>Contents</b>	<b>Page No.</b>
1	Classification of fungal infections	3
2	Classification and description of gel	27
3	Physical and chemical properties of carbopol	36
4	Viscosity range of different carbopol polymers	37
5	Use of propylene glycol	42
6	Use of stearic acid	45
7	List of materials used in formulations	60
8	List of chemicals used	61
9	List of micro-organisms (culture) used	61
10	List of equipments and instruments	62
11	Limits for quality parameters	65
12	Independent variables and their coded values	72
13	Full factorial design layout	73
14	Vidang gel formulations using $3^2$ full factorial design	73
15	Independent variables and their coded values	79
16	Full factorial design layout	79
17	Vidang cream formulations using $3^2$ full factorial design	80
18	Observations for description study	82
19	Observations for quantitative standard	83
20	Absorbance values of embelin in phosphate buffer (pH 7.4)	85
21	Percentage yield of Vidang extract	86

<b>Table No.</b>	<b>Contents</b>	<b>Page No.</b>
22	Data for calibration curve of embelin by HPTLC method	90
23	Physico-chemical parameters of Vidang topical gel formulations	92
24	<i>In vitro</i> diffusion study of Vidang topical gel formulations	93
25	Data of T <sub>50%</sub> of Vidang topical gel formulations	93
26	Regression Statistics of Viscosity	96
27	Analysis of variance of Viscosity	96
28	% Similarity between experimental and predicted Viscosity	98
29	Statistically predicted values of Viscosity	99
30	% Similarity for predicted values of Viscosity	100
31	Regression Statistics of T <sub>50%</sub>	103
32	Analysis of variance of T <sub>50%</sub>	103
33	% Similarity between experimental and predicted T <sub>50%</sub>	105
34	Statistically predicted values of T <sub>50%</sub>	106
35	% Similarity for predicted values of T <sub>50%</sub>	107
36	Regression Statistics of DR <sub>1</sub>	110
37	Analysis of variance of DR <sub>1</sub>	110
38	% Similarity between experimental and predicted DR <sub>1</sub>	112
39	Statistically predicted values of DR <sub>1</sub>	113
40	% Similarity for predicted values of DR <sub>1</sub>	114
41	Composition of optimized formulation (OF)	117
42	Physico-chemical parameters of optimized formulation (OF)	117

Table No.	Contents	Page No.
43	<i>In vitro</i> diffusion and <i>Ex vivo</i> permeation study of optimized formulation (OF)	119
44	Stability study parameters of optimized formulation (OF)	122
45	<i>In vitro</i> diffusion study of optimized formulation (OF) after stability studies	122
46	Physico-chemical parameters of Vidang topical cream formulations	125
47	<i>In vitro</i> diffusion study of Vidang topical cream formulations	126
48	Data of T <sub>50%</sub> of Vidang topical cream formulations	126
49	Regression Statistics of Viscosity	129
50	Analysis of variance of Viscosity	129
51	% Similarity between experimental and predicted Viscosity	131
52	Statistically predicted values of Viscosity	132
53	% Similarity for predicted values of Viscosity	133
54	Regression Statistics of T <sub>50%</sub>	136
55	Analysis of variance of T <sub>50%</sub>	136
56	% Similarity between experimental and predicted T <sub>50%</sub>	138
57	Statistically predicted values of T <sub>50%</sub>	139
58	% Similarity for predicted values of T <sub>50%</sub>	140
59	Regression Statistics of DR <sub>1</sub>	143
60	Analysis of variance of DR <sub>1</sub>	143
61	% Similarity between experimental and predicted DR <sub>1</sub>	145
62	Statistically predicted values of DR <sub>1</sub>	146

<b>Table No.</b>	<b>Contents</b>	<b>Page No.</b>
63	% Similarity for predicted values of DR <sub>1</sub>	147
64	Composition of optimized formulation (OC)	150
65	Physico-chemical parameters of optimized formulation (OC)	150
66	<i>In vitro</i> diffusion and <i>Ex vivo</i> permeation study of optimized formulation (OC)	152
67	Stability study parameters of optimized formulation (OC)	155
68	<i>In vitro</i> diffusion study of optimized formulation (OC) after stability studies	155
