ACKNOWLEDGEMENTS

My vocabulary is too little to express the immense degree of gratitude and respect for my esteemed guide Dr. Sulagna Basu, Scientist-C, NICED, Kolkata, for introducing me to the basic aspects of research. Her constant effort in encouraging and motivating me, her amazing patience during trying situations throughout the study period, her valuable suggestions and the immense scientific and intellectual freedom have gone a long way in grooming me and bringing my scientific outlook to the present status.

I express sincere gratitude to Dr. Arun K. Singh, Head of the Dept. of Neonatology, Institute of Postgraduate Medical Education & Research, SSKM Hospital, Kolkata. His firm hold and experience both as a scientist and a clinician encouraged me to finish this work. I must not forget to acknowledge the valuable help offered to me by Dr. Rajlakshmi Viswanathan, Dr. Sudipta Dasgupta, Dr. Suchandra Mukherjee, Dr. Shyamal Sardar, Dr. Tapas Som for their valuable suggestions and for providing me an opportunity to work at his Department during my PhD. It is indeed a life-long privilege to have worked with all of them.

I humbly record my deep sense of gratitude to Dr. G. B. Nair, Ex Director, NICED and Dr. Sekhar Chakrabarti, Scientist G, presently Director-in-Charge NICED for providing the perfect research environment and also for their constant support, motivation and encouragement throughout. I am extremely grateful to Dr. T. Ramamurthy (Deputy Director, NICED), Dr. Ranjan Kumar Nandy for their highly constructive suggestions and in helping with the direction of my research efforts. I duly acknowledge and appreciate the help and co-operation rendered to me by all other respected scientists of NICED.
I wish to convey a special message of gratitude to Parijat da, Swaswati, Somdatta, Shravani, Suman da, and Subhadeep da. I am also thankful to all the staff of NICED for their help and co-operation.

The financial assistance provided to me in the form of Senior Research Fellow from The Collaborative Research Centre of Okayama University for Infectious Diseases in India is gratefully acknowledged.

This thesis work is dedicated to my parents, Sukumar Roy and Manjusree Roy, who have endeavoured to give nothing but the best academic exposure to their children. I will ever remain obliged to my mother for giving me this opportunity to stand up in life, for teaching me the values of life, for helping me to be a good learner, and for helping me to develop the self-confidence to achieve my childhood dreams. I thank her for her patience during the time of my Ph.D program and for her uncomplaining support lent out to me.

I wish to convey a special message of gratitude to my sisters Mrs Debasree Dutta, who have nothing to do with work in this thesis, but always bringing me so much joy & love and Mrs Tanusree Ray for her help and assistance during my Ph.D work.

On this platform I would want to take the opportunity to thank my husband Debojyoti Chatterjee, whose presence in my life has been a great source of inspiration. Though no words of appreciation would be enough to achieve this task, I want to thank him for his untiring efforts to help me with his invaluable suggestions, I am grateful for his moral support that I needed to complete this mammoth task. I thank him for his presence in my life.

Finally, I thank the almighty God, who always came in the form of all these people and many more in ensuring that I reach this important milestone of my life.
