

Content

	Certificate from the Supervisor.....	i
	Declaration.....	ii
	Acknowledgement.....	iii
	Abstract.....	v
	Chapter 1	
	Introduction.....	01
1.1	Photovoltaic: From the beginning to real application...	04
1.2	Photoelectrochemistry, photography and Sensitisation.....	07
1.3	Dye-sensitized Solar Cells.....	08
	1.3.1 Basic principle of DSSCs.....	10
	1.3.2 Photoelectrode.....	14
	1.3.3 Electron Transfer dynamics.....	17
	1.3.4 Electrolyte and Organic hole conductor material.....	23
	1.3.5 Counter Electrode.....	24
1.4	Objective of this work.....	26
	References.....	28
	Chapter 2	
	Investigated Materials and Methods.....	39
2.1	Chromophores.....	39
	2.1.1 Classical chromophores.....	40
2.2	Importance of Phthalocyanine dye sensitizers.....	43
2.3	Methods to optimize the metal free organic dyes.....	47

2.3.1	Electronic structure theory.....	47
2.3.2	Density Functional Theory.....	49
2.3.3	The Hartree-Fock approximation.....	50
2.3.4	Basis sets.....	56
2.3.5	Absorption spectra using time-dependent density functional theory.....	57
2.3.6	Polarizable continuum solvent model.....	59
	References.....	60

Chapter 3

Geometries, electronic structure, polarizability, hyperpolarizability and spectral analysis on Silicon dichloride substituted Phthalocyanine for dye

	sensitized solar cells.....	65
3.1	The geometric structure.....	65
3.2	Electronic structures and charges.....	65
3.3	IR and Raman frequencies.....	84
3.4	Polarizability and hyperpolarizability.....	85
3.5	Electronic Absorption Spectra and Sensitized Mechanism.....	89
	References.....	108

Chapter 4

DFT and CIS-DFT study on Silicon dihydroxide substituted Phthalocyanine for dye sensitized solar cells.....

	cells.....	109
4.1	The geometric structure.....	109
4.2	Electronic structures and charges.....	109

4.3	Polarizability and hyperpolarizability.....	113
4.4	Electronic Absorption Spectra and Sensitized Mechanism.....	117
	References.....	128

Chapter 5

Quantum chemical calculation of ZnCl₂ substituted

Phthalocyanine for dye sensitized solar cells

applications..... 129

5.1	The geometric structure.....	129
5.2	Electronic structures and charges.....	129
5.3	IR and Raman frequencies.....	134
5.4	Polarizability and hyperpolarizability.....	135
5.5	Electronic Absorption Spectra and Sensitized Mechanism.....	139
	References.....	152

Chapter 6

Electronic spectra and HOMO-LUMO studies on

Nickel, copper substituted Phthalocyanine for solar

cell applications..... 153

6.1	Structures of Ni, Cu substituted Phthalocyanines.....	153
6.2	HOMO-LUMO energy gap of the Ni, Cu substituted Phthalocyanines.....	156
6.3	UV-Vis spectra of the Ni, Cu substituted Phthalocyanines.....	162
	References.....	164

Chapter 7

Theoretical study on Cobalt substituted

	Phthalocyanine for dye sensitizer solar cells.....	165
7.1	Introduction.....	165
7.2	Structure.....	165
7.3	HOMO-LUMO energy gap of Cobalt substituted Phthalocyanine dye sensitizer.....	183
7.4	UV-Vis spectra of Cobalt substituted Phthalocyanine...	186
	References.....	189

Chapter 8

	Concluding remarks.....	190
--	--------------------------------	------------

List of Figures

1.1	Working principle in a illuminated dye-sensitized solar cells under open circuit conditions. VB and CB stand for valence band and conduction band.....	12
1.2	a) Energy band diagram of conventional p-n junction under short circuit conditions; b) Charge separation under illumination.....	13
1.3	Schematic diagram of electron-transfer processes at the dye-sensitized heterojunction.....	19
2.1	The chemical structures of the Ruthenium based sensitizers	40
2.2	The new compound of Ruthenium based sensitizers.....	41
2.3	Merocyanine dye Mb(18)-N.....	42
2.4	Examples of organic dyes.....	43
3.1	Optimized Geometry structure of the Silicon dichloride substituted phthalocyanine.....	66
3.2	The frontier molecular orbital energies and corresponding density of state (DOS) spectrum of the dye Silicon dichloride substituted phthalocyanine.....	79

3.3	Calculated FT-IR spectra of Silicon dichloride substituted phthalocyanine.....	84
3.4	Calculated Raman spectra of Silicon dichloride substituted Phthalocyanine.....	85
3.5	Observed UV/Vis spectra of Silicon dichloride substituted phthalocyanine.....	90
3.6	Isodensity plot (isodensity contour = 0.02 a.u.) of the frontier orbitals of Silicon dichloride substituted phthalocyanines	98
4.1	Optimized Geometry structure of the Silicon dihydroxide substituted Phthalocyanine.....	110
4.2	The frontier molecular orbital energies and corresponding density of state (DOS) spectrum of Silicon dihydroxide substituted phthalocyanines dye.....	112
4.3	UV/Vis electronic absorption spectra of Silicon dihydroxide substituted phthalocyanine in acetonitrile solvent.....	118
4.4	Isodensity plot (isodensity contour = 0.02 a.u.) of the frontier orbitals of Silicon dihydroxide substituted phthalocyanines and corresponding orbital energies (in eV).....	125

5.1	Optimized Geometry structure of the ZnCl ₂ substituted phthalocyanine.....	130
5.2	The frontier molecular orbital energies and corresponding density of state (DOS) spectrum of the dye ZnCl ₂ substituted phthalocyanine.....	133
5.3	Calculated FT-IR spectra of ZnCl ₂ substituted phthalocyanine.....	134
5.4	Calculated Raman spectra of ZnCl ₂ substituted phthalocyanine.....	135
5.5	Calculated UV/Vis spectra of Zinc dichloride substituted phthalocyanine.....	140
5.6	Isodensity plot (isodensity contour = 0.02 a.u.) of the frontier orbitals of ZnCl ₂ substituted phthalocyanines and corresponding orbital energy.....	149
6.1	Molecular Structures of MPc (M=Ni, Cu) molecule.....	153
6.2	Isodensity plot (isodensity contour = 0.02 a.u.) of the frontier orbitals of Metal (M= Ni, Cu) substituted phthalocyanines and corresponding orbital energy.....	157
6.3	(A) Top view of a NiPc molecule. (B) Density plot of the highest occupied molecular orbital (HOMO).....	158

6.4	HOMO-LUMO energy gap of Ni, Cu substituted Phthalocyanine dye sensitizer.....	159
6.5	UV/Vis electronic absorption spectra of Ni, Cu substituted phthalocyanine in acetonitrile solvent.....	162
7.1	Cobalt phthalocyanine.....	166
7.2	Crystal field splitting diagram for a quadratic planar coordination.	179
7.3	Spin resolved projected DOS of CoPc calculated with B3LYP/6-311++G(d,p).	180
7.4	Spin resolved projected DOS of CoPc calculated with DFT using the B3LYP/6-311++G(d,p). In A the DOS of Co is shown. For clarity the d-contribution is split into different values of m, which deliver information on the d-states involved. In the second panel the DOS for the cobalt d-orbitals and the nitrogen N1 porbitals (Fig. 7.3) is given. Positive values of the DOS correspond to spin up and negative values to spin down.....	182
7.5	Molecular orbital spatial distribution for Cobalt substituted Phthalocyanine.....	185
7.6	UV/Vis electronic absorption spectra of Cobalt substituted phthalocyanine in acetonitrile solvent.....	187

List of Tables

3.1	Bond lengths (in Å), bond angles (in degree) and dihedral angles (in degree) of the dye Silicon dichloride substituted phthalocyanines.....	67
3.2	Summary of Natural Population Analysis of the dye Silicon dichloride substituted Phthalocyanine.....	80
3.3	Polarizability (α) of the dye Silicon dichloride substituted phthalocyanine (in a.u.).....	88
3.4	Hyperpolarizability (β) of the dye Silicon dichloride substituted phthalocyanine (in a.u.).....	88
3.5	Computed excitation energies, electronic transition configurations and oscillator strengths (f) for the optical transitions with $f > 0.01$ of the absorption bands in visible and near- UV region for the dye Silicon dichloride substituted Phthalocyanine.....	93
4.1	Selected Bond lengths (in Å) and bond angles (in degree) of the dye Silicon dihydroxide substituted phthalocyanines.....	111
4.2	Polarizability (α) of the dye Silicon dihydroxide substituted phthalocyanine (in a.u.).....	115

4.3	Hyperpolarizability (β) of the dye Silicon dihydroxide substituted phthalocyanine (in a.u.).....	115
4.4	Computed excitation energies, electronic transition configurations and oscillator strengths (f) for the optical transitions with $f > 0.01$ of the absorption bands in visible and near- UV region for the dye Silicon dihydroxide substituted phthalocyanine in acetonitrile solvent.....	119
5.1	Selected bond lengths (in Å), bond angles (in degree) and dihedral angles (in degree) of the dye $ZnCl_2$ substituted phthalocyanines.....	131
5.2	Polarizability (α) of the dye $ZnCl_2$ substituted phthalocyanine (in a.u.).....	137
5.3	Hyperpolarizability (β) of the dye $ZnCl_2$ substituted phthalocyanine (in a.u.).....	137
5.4	Computed excitation energies, electronic transition configurations and oscillator strengths (f) for the optical transitions with $f > 0.01$ of the absorption bands in visible and near- UV region for the dye $ZnCl_2$ substituted Phthalocyanine	142
6.1	Calculated structural parameters ~bond length (Å), bond angle (θ); atom labels from Fig. 6.1.....	155
7.1	Calculated structural parameters of CoPc.	167
