ACKNOWLEDGEMENT

I wish to express my deep sense of gratitude to Professor B. N. Mandal of Physics and Applied Mathematics Unit, Indian Statistical Institute, Kolkata, for his supervision of my research work. He introduced me to the area of research in water waves and related topics in applied mathematics when I first joined as a research scholar in his research scheme entitled "Water Wave Scattering by Obstacles and Surface Discontinuities" sponsored by National Board for Higher Mathematics, Mumbai, India. Due to his continuous effort and inspiration I have succeeded to carry out my investigations without any hindrance. He has not only guided me with immense care but has also increased my appetite to know the various aspects of applied mathematics precisely.

I am grateful to my teacher Dr. Sudeshna Banerjea of Department of Mathematics, Jadavpur University, for her encouragement in my research.

I am thankful to the Council of Scientific Research, New Delhi, India, for the award of a Senior Research Fellowship during the tenure of which this thesis is completed. I am also thankful to Indian Statistical Institute, Kolkata, for providing me with the various facilities for research.

I acknowledge my sister as my first teacher in mathematics. I thank my husband for his continuous support, patience and encouragement during the period of my research. Finally, I am indebted to my parents whose immense sacrifice and inspiration have made what I am.
