

### LIST OF TABLES

<b>TABLE NO.</b>	<b>TABLE CAPTION</b>	<b>PAGE NO.</b>
<b>1</b>	Comprehensive data on chromium	<b>I-4</b>
<b>2</b>	Various mechanisms of chromate resistance in reported strains	<b>I-13</b>
<b>3</b>	Morphologically different chromate resistant bacteria (and their Gram characters and cell-shape) primarily isolated on selective media	<b>V-2</b>
<b>4</b>	Minimum Inhibitory Concentration or MIC values of chromium against isolates	<b>V-3</b>
<b>5</b>	Comparative study of MIC of our isolates with others' work	<b>V-3</b>
<b>6</b>	Biochemical characteristics of chromate resistant isolates	<b>V-9</b>
<b>7</b>	Identification of isolates; their NCBI GenBank (USA) and NII Culture Repository (India) accession numbers	<b>V-11</b>
<b>8</b>	Antibiotic sensitivity of the isolates: diameters of the zones are given in "mm"	<b>V-15</b>

<b>TABLE NO.</b>	<b>TABLE CAPTION</b>	<b>PAGE NO.</b>
<b>9</b>	Resistance of the isolates against heavy metals  (other than Cr VI)	<b>V-18</b>
<b>10</b>	Cysteine residues in isolates	<b>V-19</b>
<b>11</b>	Comparative study of chromium uptake by isolates	<b>V-25</b>
<b>12</b>	Comparative study of chromium uptake by our isolates  with published works	<b>V-26</b>
<b>13</b>	Bioremediation studies of T2 and S2	<b>V-27</b>
<b>14</b>	$q_e$ of various Cr VI concentrations at equilibrium	<b>V-54</b>
<b>15</b>	Desorption study results on alginate beads different  eluent	<b>V-58</b>
<b>16</b>	Interference of various meals in Cr VI  detection/quantification	<b>V-66</b>
<b>17</b>	Comparative study of microbial biosensors in published  works against current study	<b>V-69</b>
