Contents

1 Introduction
   1.1 General overview and terminology of face detection and recognition 5
      1.1.1 Process flow in face recognition 7
   1.2 A brief review on face detection techniques 11
      1.2.1 Statistical approaches 12
      1.2.2 Facial feature based methods 12
   1.3 A brief review on face recognition techniques 14
      1.3.1 Subspace based face recognition 14
      1.3.2 Selected works on face classifiers 20
   1.4 Face reconstruction techniques 21
   1.5 Optical techniques in face detection and recognition 24
   1.6 Motivation of the Work 26
   1.7 Road Map of the thesis 31

2 Multivariate Histogram Based Facial Feature Segmentation and Classification 35
   2.1 Introduction 36
CONTENTS

2.2 Multivariate histogram based image segmentation ........................ 38
  2.2.1 Method for finding major clusters from a multivariate histogram 39
2.3 Experiments and analysis of results ................................. 41
  2.3.1 Verification of the algorithm on an artificial dataset ...... 42
    2.3.1.1 Generation of the artificial dataset ................. 42
    2.3.1.2 Results on the created artificial dataset ........ 45
  2.3.2 Experiments and results on the color and IR face image
    datasets ................................................................. 46
    2.3.2.1 Description of datasets used ....................... 46
    2.3.2.2 Experimental stages and remarks .................. 47
  2.3.3 Utility of facial features .................................. 51
2.4 Conclusions ....................................................... 53

3 Threshold Selection for Intra Face Classes Using Set Estimation
  Technique 56
  3.1 Introduction ..................................................... 57
  3.2 Set estimation methods ......................................... 61
  3.3 Mathematical preliminaries of the threshold selection ........ 62
    3.3.1 Intuition for the method ................................ 63
  3.4 Proposed threshold selection method ...................... 66
    3.4.1 Application of the proposed set estimation method on an
    artificial data set ............................................. 68
    3.4.2 Class specific thresholds in face space ............ 70
  3.5 Experimental design and result analysis on face datasets .... 72
    3.5.1 Description of face dataset .............................. 72
    3.5.1.1 Recognition rates .................................... 73
    3.5.2 Open test results considering imposters in the system .. 76
    3.5.3 Recognition rates considering only clients in the system 79
    3.5.4 Application on video face dataset ................... 80
    3.5.4.1 Recognition results with different training and test
    videos ......................................................... 82
    3.5.5 Application on color datasets .......................... 83
  3.6 Discussions and conclusions ................................ 84
