List of Tables

1.1 Major contributions on statistical and subspace approaches in face detection ........................................... 13
1.2 Major contributions on facial feature extraction techniques for face detection ............................................. 15
1.3 Highlights of some review articles on subspace based face recognition techniques .................................... 16
1.4 Major contributions on linear subspace methods in face recognition ......................................................... 19
1.5 Major contribution in non linear subspace methods in face recognition .................................................... 19
1.6 Comparative advantages / disadvantages of 3D face synthesis ................................................................. 22
1.7 Comparative advantages / disadvantages of 2D to 2D face synthesis ..................................................... 23

2.1 Comparative study of recognition rates using full image and segmented images ......................................... 52

3.1 Formation of face space ......................................................................................................................... 73
3.2 Formation of face space ......................................................................................................................... 81
3.3 Comparison of proposed method with PCA and Nearest neighbor method .................................................. 81
3.4 Open test results ................................................................................................................................... 82

4.1 Face non-face classification: COIL-100 as test set ................................................................................. 97
4.2 Training-Validation-Test Set Configurations ......................................................................................... 99
4.3 Comparison table .................................................................................................................................. 100

5.1 Variation of recognition rates, where generated faces are added in the training set .................................. 130
LIST OF TABLES

5.2 Variation of recognition rates, where the training set consists of only the generated images .......................................................... 132
