CONTENTS

Preface

1. Introduction 1-39
   1.1 Plasma proteins 3
   1.2 Importance of drug protein binding 9
   1.3 Drug-drug interactions and plasma-protein binding 10
   1.4 Plasma-protein binding and age 12
   1.5 Plasma-protein binding and pregnancy 13
   1.6 Plasma-protein binding and drug development: 13
   1.7 Plasma protein binding and pH, temperature, concentration of drugs and ionic strength 14
   1.8 Species differences and plasma protein binding 15
   1.9 Binding mechanism 16
   1.10 Protein binding and distribution of drugs and its subsequent clearance by various routes 20
   1.11 Protein binding and therapeutic drug monitoring 24
   1.12 Thermodynamic treatment of protein binding data and mechanism of interaction 27
   1.13 Recent advances in protein binding studies 32

2. Drugs used in study 40-45
2.1 Nimesulide 40
2.2 Lamivudine 41
2.3 Lamotrigine 42
2.4 Diclofenac sodium 43

3. Drug-plasma protein interaction 46-54
   3.1 Binding equilibrium 46
   3.2 Statistical data treatment 52

4. Aim and objectives 55-57

5. Plasma-protein binding determination 58-72
   5.1 Equilibrium dialysis 59

   5.2 Experimental section 60
   5.3 Dialysis procedure 67
   5.4 Method of calculation 70

6. Results and discussion 73-117
   6.1.1 Nimesulide binding to bovine serum albumin 73
   6.2.1 Diclofenac sodium binding to bovine serum albumin 85
   6.3.1 Lamivudine binding to bovine serum albumin 97
   6.4.1 Lamotrigine binding to horse serum 108

7. Summary and conclusion 118-120
