

## Acknowledgments

It would not have been possible to write this doctoral thesis without the help and support of the kind people around me, and I take this opportunity to record my sincerest thanks. To begin with, this thesis would not have been possible without the help, support and patience of my supervisor, **Prof. Mitali Chatterjee**, who genuinely showed me the way in every part of my research, whether in being how to make a good presentation or how to apply for a fellowship. Her encouragement, constructive criticism really helped me to grow as a researcher. How can I forget those memorable discussions where she helped me in troubleshooting of experiments or even for my visa application! She is undoubtedly the best guide in my life after my parents simply because of her passion for science, quality to motivate students and many more. Her confidence in me particularly when I needed motivation and support kept me on track. It is no wonder then that I often feel that this is one debt to her that I can never repay and I always want to remain her student.

I express my sincere gratitude to the **Director**, Institute of Post Graduate Medical Education and Research, for sanctioning my research work, the present and past departmental heads (Pharmacology), **Prof. Dipankar Bhattacharya** and **Prof. CN Islam**, for not only ensuring unfettered access to the departmental facilities but also showering their wit and affection on me, **Prof. Avijit Hazra** and **Prof. Suparna Chatterjee**, for helping me out on many an occasion with my statistical analyses and engaging in frequent well-rounded discussions on recent developments in the news, scientific and otherwise; all teachers and technical staff in the Dept. of Pharmacology, IPGME&R also deserve my earnest thanks. I am also genuinely grateful to the expert guidance and advice received from **Prof. Sasanka Chakrabarti**, my Co-Supervisor.

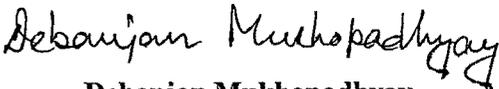

To Professor **Joyashree Nath Barbhuiya** at the School of Tropical Medicine, I express my deepest regard and appreciation for their assistance in obtaining clinical samples for my study. Of course, none of these samples would have been made available without the dermatological expertise of **Dr. Nilay Kanti Das** (Nilay Da), who always apart from his dermatological skill effortlessly helped me in analyzing the clinical and/or epidemiological findings during my research, often in the middle of his hectic work schedule and this was indispensable for the execution of this study. I would also like to put on record, my heartfelt respect for **Prof. Paul Martin Kaye**, and appreciation for **Dr. Jane Dalton**, **Dr. Jack Lim**, **Dr. Mohamed Osman**, **Dr. Nazmiya Brown**, **Dr. Lynette Beatie**, and the rest of the members at the Centre for immunology and Infection, Dept. of Biology, University of York, UK, who supported me to complete a vital area of my doctoral work.

I feel extremely fortunate and privileged to have got lovely co-workers who are in order here past and present, seniors, contemporaries and juniors **Debjani di, Sudipto da, Hari da, Piu di, Rupashree di, Nazmun di, Avijitda, Alakda, Sunandadi, Susmita R, Susmita G, Deepak, Debasree, Asis, Shibabrata, Dibyendu, Soumita, Suhana, Sourav, Sritama, Sneha, Poulami, Indrani, Uttam** and many summer students. I will always treasure the experience of working in their delightful company, buoyed by their valuable support such as critical evaluation and invaluable suggestions for making presentations. **Tanmoy da, Ananya di, Anupam da, Gairik da, Supriyada, Rajarshida, Richeek** and all MD students of the Department deserve my sincere thanks for their hard-earned knowledge of medicine and physiology with me that enriched my knowledge. I particularly thank two close friends who are fortunately my lab mates also, Susmita (Roy) and Shibu (Shibabrata) who always made the lab a happy place for me and their support in my research work during performance of the experiments, will always remain etched in my memory. A special thanks to both of them and obviously my other lab members to bear me for the last 5 yrs. Among other people, I humbly acknowledge the expertise of **Bharatda** for drawing of blood and tissues from patients which was the vital part of my research work, patience of **Lala Ram Balmiki**, and **Mukesh da**, our security person, that enabled me to conclude many a long experiment in relative peace.

However, the greatest thanks is owed to my **parents**, my wife **Ipsita**, my elder brother **Priyanjan** and rest of the family for their enormous support, love and untiring help during the whole time. Without their encouragement and understanding it would have been impossible for me to finish this work. I cannot end this list without mentioning the name of my beloved pet, Late '**Bushu**' who will always have a special place in my heart. She was my 'stress remover' and deserves the credit to make me happy in those days.

Finally, I would like to partly dedicate this thesis to the nameless and faceless patients with Post Kala-azar dermal leishmaniasis, in the hope that someday, better treatment options are made available to them which will facilitate prompt cure and ultimate elimination of the disease.

Lastly, I acknowledge my indebtedness to the **Indian Council of Medical Research (ICMR), Govt. of India** for my providing me the 5 yrs fellowship, **Dept. of Science and Technology (DST), Govt. of India** and **Centre for International Co-operation in Science (CICS), Govt. of India** for supporting me with their international travel award scheme.
