

## LIST OF FIGURES

**Fig. 1: Structure of Gibbsite**

**Fig. 2: Structure of Bayerite**

**Fig. 3: Structure of Boehmite**

**Fig. 4: Structure of Transition alumina**

**Fig. 5: The basal plane of  $\alpha$ -alumina showing the hexagonal close packed anion sublattice (large open circles) and cations occupying two-thirds of the octahedral interstices (small filled circles); small open circles are empty octahedral interstices (after Kronberg,1957)**

**Fig. 6: The cation sublattice in of  $\alpha$ -alumina. Filled circles are Al, open circles are empty octahedral interstices (after Kronberg,1957)**

**Fig. 7: Thermal dehydration sequences of hydrated alumina in air**

**Fig. 8: FTIR spectra of bauxite sample**

**Fig. 9: FTIR spectra of synthetic alumina hydrate sample**

**Fig. 10: XRD pattern of bauxite sample a) dried at 110°C b) calcined at 300°C and c) calcined at 500°C**

**Fig. 11: XRD pattern of synthetic alumina hydrate sample dried at 100°C**

**Fig. 12: SEM micrograph of bauxite sample dried at 110°C**

**Fig. 13: SEM micrograph of synthetic alumina hydrate sample dried at 110°C**

**Fig. 14: TG-DTGA curve of bauxite sample at three heating rates (5.00, 7.50 and 10.00 Kmin<sup>-1</sup>)**

- Fig. 15: TG-DTGA curve of synthetic alumina hydrate at three heating rates (5.00, 7.50 and 10.00 Kmin<sup>-1</sup>)**
- Fig. 16: Equilibrium dehydration curve of bauxite sample on progressive heat treatment**
- Fig. 17: Equilibrium dehydration curve of synthetic alumina hydrate sample on progressive heat treatment**
- Fig. 18: Mass gain due to rehydration of the dehydrated bauxite sample at different relative humidities**
- Fig. 19: Mass gain due to rehydration of the dehydrated synthetic alumina hydrate sample at different relative humidities**
- Fig. 20: Mass loss vs time plot during dehydration of bauxite sample of -20+50 mesh size fraction at different temperatures**
- Fig. 21: Mass loss vs time plot during dehydration of bauxite sample of -50+80 mesh size fraction at different temperatures**
- Fig. 22: Mass loss vs time plot during dehydration of bauxite sample of -80+120 mesh size fraction at different temperatures**
- Fig. 23:  $\log(\Delta L)$  plot of bauxite sample of -20+50 mesh size fraction at different temperatures**
- Fig. 24:  $\log(\Delta L)$  plot of bauxite sample of -50+80 mesh size fraction at different temperatures**
- Fig. 25:  $\log(\Delta L)$  plot of bauxite sample of -80+120 mesh size fraction at different temperatures**
- Fig. 26: Plot of  $\log((L_\infty - L)/L_\infty)$  against time for bauxite sample of -20+50 mesh size fraction at different temperatures**

**Fig. 27: Plot of  $\log((L_\infty - L)/L_\infty)$  against time for bauxite sample of -50+80 mesh size fraction at different temperatures**

**Fig. 28: Plot of  $\log((L_\infty - L)/L_\infty)$  against time for bauxite sample of -80+120 mesh size fraction at different temperatures**

**Fig. 29: Arrhenius plot for bauxite sample of -20+50 mesh size fraction for initial and final stage dehydration**

**Fig. 30: Arrhenius plot for bauxite sample of -50+80 mesh size fraction for initial and final stage dehydration**

**Fig. 31: Arrhenius plot for bauxite sample of -80+120 mesh size fraction for initial and final stage dehydration**

**Fig. 32: Plot of  $\ln t_{\alpha,1}$  vs  $1/T_1$  for dehydration of bauxite sample of -20+50 mesh size fraction**

**Fig. 33: Plot of  $\ln t_{\alpha,1}$  vs  $1/T_1$  for dehydration of bauxite sample of -50+80 mesh size fraction**

**Fig. 34: Plot of  $\ln t_{\alpha,1}$  vs  $1/T_1$  for dehydration of bauxite sample of -80+120 mesh size fraction**

**Fig. 35: Mass loss vs time plot during dehydration of synthetic alumina hydrate sample of -80+120 mesh size fraction at different temperatures**

**Fig. 36:  $\log(\Delta L)$  plot of synthetic alumina hydrate sample of -80+120 mesh size fraction at different temperatures**

**Fig. 37: Plot of  $\log((L_\infty^1 - L)/L_\infty^1)$  against time for synthetic alumina hydrate sample of -80+120 mesh size fraction at different temperatures**

**Fig. 38: Arrhenius plot for synthetic alumina hydrate sample of -80+120 mesh size fraction for initial and final stage dehydration**

**Fig. 39: Plot of  $\ln t_{\alpha,1}$  vs  $1/T_1$  for dehydration of synthetic alumina hydrate sample of -80+120 mesh size fraction**

**Fig. 40: FWO analysis of the step 1 for thermal decomposition of the bauxite sample**

**Fig. 41: FWO analysis of the step 2 for thermal decomposition of the bauxite sample**

**Fig. 42: Modified Coats and Redfern analysis of the step 1 for thermal decomposition of the bauxite sample**

**Fig. 43: Modified Coats and Redfern analysis of the step 2 for thermal decomposition of the bauxite sample**

**Fig. 44: Kissinger analysis of the step 1 and step 2 for thermal decomposition of the bauxite sample**

**Fig. 45: FWO analysis of the step 1 for thermal decomposition of the synthetic alumina hydrate sample**

**Fig. 46: FWO analysis of the step 2 for thermal decomposition of the synthetic alumina hydrate sample**

**Fig. 47: Modified Coats and Redfern analysis of the step 1 for thermal decomposition of the synthetic alumina hydrate sample**

**Fig. 48: Modified Coats and Redfern analysis of the step 2 for thermal decomposition of the synthetic alumina hydrate sample**

**Fig. 49: Kissinger analysis of the step 1 and step 2 for thermal decomposition of the synthetic alumina hydrate sample**

**Fig. 50:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model A2, A3, A4, R2 and R3 of thermal decomposition of bauxite sample**

**Fig. 51:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model P2, P3 and P4 of thermal decomposition of bauxite sample**

**Fig. 52:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model D1, D2 and D3 of thermal decomposition of bauxite sample**

**Fig. 53:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model A2, A3, A4, R2 and R3 of thermal decomposition of synthetic alumina hydrate sample**

**Fig. 54:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model P2, P3 and P4 of thermal decomposition of synthetic alumina hydrate sample**

**Fig. 55:  $y(\alpha)$  -  $\alpha$  curves for the reaction mechanism model D1, D2 and D3 of thermal decomposition of synthetic alumina hydrate sample**
