List of Tables

1. Table 1a: Terminology commonly used in studies related to HCV genomic heterogeneity.
2. Table 1b: Classification systems for HCV genotypes.
3. Table 2: List of Primers Used in the Study.
4. Table 3: Genotype distribution (shown in %age) among liver disease patient groups included in the study.
5. Table 4: Estimates of Serum ALT Levels in Different Groups of Studied Population.
6. Table 5: Highest and Lowest Serum ALT Value and Mean ALT in different groups of Patient Population.
7. Table 6: List of strain Names and their GenBank Accession Number.
8. Table 7: HCV Quasispecies Evaluation in Chronically Infected Patients. Evolution of core-HVR1 quasispecies in 5 patients with changes during follow-up.
9. Table 8: Genotype distribution among all the groups included in the study.
10. Table 9: Nucleotide diversity of the core protein-coding sequence of the HCV genome obtained from patients with and without Hepatocellular Carcinoma.
11. Table 10: Changes in the core protein sequences of HCV isolates from patients with hepatocellular carcinoma.
14. Table 13: Prevalence of genotypes and subtypes in the different age groups.
15. Table 14: Genotype distribution according to gender and route of transmission.
