# Contents

1. Introduction  
2. Review of Literatures  
   2.1. Sources of arsenic exposure  
   2.2. Speciation chemistry of arsenic  
   2.3. Absorption and distribution of arsenic  
   2.4. Biotransformation of arsenic  
      2.4.1. Role of microorganisms  
      2.4.2. Methylation by higher organisms  
   2.5. Excretion of arsenic  
   2.6. Toxic effects of arsenic  
      2.6.1. Arsenic and skin damage  
      2.6.2. Arsenic and respiratory dysfunction  
      2.6.3. Arsenic and vascular damage  
      2.6.4. Arsenic and hematopoietic abnormalities  
   2.6.5. Arsenic and liver damage  
   2.6.6. Arsenic and kidney damage  
   2.6.7. Arsenic and intestinal functions  
   2.6.8. Arsenic and nervous system  
   2.6.9. Arsenic and immune system  
   2.6.10. Arsenic and reproductive system  
   2.6.11. Arsenic and genotoxicity  
   2.6.12. Arsenic-protein binding as a mechanism of cytotoxicity  
   2.6.13. Arsenic and generation of stress proteins  
   2.7. Arsenic induces metallothionein gene expression  
   2.8. Arsenic alters the cellular antioxidant system  
   2.9. Arsenic and other metabolic activities  
   2.10. Role of various antidotes in prevention of arsenic poisoning

3. Aim of the Present Investigation

4. Materials and Methods
   4.1. Chemicals
   4.2. Animals and diets
   4.3. Exposure to arsenic
   4.4. Tissue collection
   4.5. Homogenate preparation
   4.6. Biochemical methods employed
      4.6.1. Arsenic analysis
      4.6.2. Blood glucose level
      4.6.3. Liver and muscle glycogen contents
      4.6.4. Urinary glucose content
      4.6.5. Liver pyruvic acid level
      4.6.6. Tissue free amino acid nitrogen content
      4.6.7. Glutamate-oxaloacetate transaminase (GOT) and glutamate-pyruvate transaminase (GPT) activities
      4.6.8. Glucose 6-phosphatase activity
      4.6.9. Lactate dehydrogenase (LDH) activity
      4.6.10. Serum lactic acid content
      4.6.11. Tissue protein content
      4.6.12. Tissue free hydroxyl radical
      4.6.13. Reduced glutathione (GSH) content of tissues
      4.6.15. Superoxide dismutase (SOD) activity of tissues
      4.6.16. Catalase activity of tissues
   4.7. Arsenic exposure and methionine supplementation
   4.8. Arsenic exposure and N-acetylcysteine administration
4.9. Arsenic treatment and melatonin supplementation 49
4.10. Statistical analysis 49

5. Experiments Following Arsenic Exposure 50
   5.1. Results 50
   5.2. Discussion 54
   5.3. Summary 57

6. Experiments Following Arsenic Exposure and Methionine Supplementation 59
   6.1. Results 59
   6.2 Discussion 62
   6.3. Summary 64

7. Experiments Following Arsenic Exposure and N-acetylcysteine Supplementation 66
   7.1 Results 66
   7.2. Discussion 70
   7.3. Summary 72

8. Further Experiments Following Arsenic Exposure and N-acetylcysteine Supplementation 73
   8.1. Results 73
   8.2. Discussion 75
   8.3. Summary 79
9. Experiments Following Arsenic Exposure and Melatonin Supplementation

9.1. Results

9.2. Discussion

9.3. Summary

10. Further Experiments Following Arsenic Exposure and Melatonin Supplementation

10.1. Results

10.2. Discussion

10.3. Summary

11. General Summary and Conclusion
