

## ACKNOWLEDGEMENT

I would like to thank my supervisor Dr Jayanti Basu for her support and constructive feedback she had given me throughout this process and without whom I would not have been able to complete this thesis. I would also extend the appreciation to my co-supervisor Dr Shyamal Kumar Das for providing me with the opportunity to work on neuropsychology and for teaching me about the research writing.

I would also like to thank Dr Atanu Biswas, Head of the Cognitive Clinic, Bangur Institute of Neurology, Kolkata for his support and advice. The credit also goes to all the participants who shared their memories and experiences as a means to partake in this study with me.

I would also take the opportunity to thank Dr Amar Kr Misra for his positive advice and guiding me to reach my destination.

Personally, my sincere acknowledgement also goes to my husband for his support and patience in dealing with me to complete my thesis work. His inspiration and positive words has helped me immensely while writing the thesis.

I would not miss to mention the name of my friend Sangita for her constant support and backing that has survived me through many bad times; and not to be left behind, my sister, and my mother-in-law for their unfailing support and encouragement during the challenging times.
