| Part II : OBJECTIVES OF THE STUDY             | 36-37    |

| CHAPTER 2                                      | 38-67    |
| **EXPRESSION AND PURIFICATION OF THE**         |          |
| **RECOMBINANT LETHAL FACTOR OF Bacillus anthracis** |          |
| **Introduction**                               | 38       |
| **Materials**                                  | 41       |
| **Experimental Methodology**                  | 42-58    |
| **Cloning and Expression of LF alongwith 167 residues of PA** | 42 |
| **Isolation of plasmid DNA**                  | 43       |
| **PCR amplification of PA^{1-167} and LF^{1-776} DNA** | 44 |
Extraction of DNA from agarose gel
Restriction digestion of DNA
Ligation
Competent cell preparation
Transformation
Screening of the transformants
Expression of LF
SDS-PAGE and Western blotting
Cloning of LF in expression vector pQE30
Small scale expression of recombinant LF in E. Coli
Sub cellular localization of the expressed protein
Time course analysis of LF expression
Growing large scale expression culture
Purification of recombinant lethal factor from E. Coli
Quantitation of LF
Radio-iodination of the proteins
Receptor binding assay
In vitro binding of LF to PA
Cell culture and cytotoxicity assay
Immunization and Serological studies

Results
Cloning of mature LF alongwith 167 residues of PA
Cloning of LF in expression vector pQE30
Expression of LF in E.coli
Sub cellular localization of the expressed protein
Time course analysis of LF expression
Purification of recombinant LF from E. Coli
Receptor binding assay
In vitro binding of LF to PA
Macrophage lysis assay
Serological studies with the purified rLF
CHAPTER 3
BIOPROCESS OPTIMIZATION AND PRODUCTION
OF THE RECOMBINANT LETHAL FACTOR USING
FED-BATCH CULTURE TECHNIQUE

Introduction 68

Experimental Methodology 68-75
Growth curve at 28°C and half concentration of the antibiotics 68
Fermentor 69
Preculture medium 69
Fermentor medium 70
Fermentor Operation in batch mode 72
Selection of alternate Carbon – source 72
Fermentor Operation in fed batch mode 73
Assay Procedures 74

Results 75-78
Effect of temperature on recombinant protein production 75
Effect of antibiotic concentration 76
Effect of C-source on the recombinant protein production 76
Effect of specific growth rate on the growth 77
Purification of recombinant Lethal factor 78

Discussion 78-81

CHAPTER 4
GENERATION OF NON-TOXIC MUTANTS OF LF
DEFECTIVE IN BINDING TO PA

Introduction 82

Experimental Methodology 83-94
Creation of a Kpn I restriction site upstream to homology 83
Cloning of LF1-143 and LF138-776 fragments in pQE30 85
Screening of the transformants
Sequencing of the construct
Denaturing gel electrophoresis
Construction of mutants at the point of homology by PCR
Cloning of LF mutant DNA fragments in pQE30
Small scale expression of mutant LF in E. Coli
Purification of mutant / deleted LF proteins
Macrophage lysis assay
Receptor binding assay
Competitive binding of LF mutants in solution

**Results**

Construction of a Kpn I restriction enzyme site
Construction of the mutants at the point of homology
Expression of LF mutants in E. Coli
Purification of mutant LF proteins from E. coli.
Toxicity of Mutant LF proteins on J774A.1 cells
Binding of LF mutants to receptor bound PA
Binding of LF to trypsin nicked PA in solution

**Discussion**

**CHAPTER 5**

**DIFFERENTIAL SCANNING CALORIMETRY OF LF**

Introduction

Experimental Methodology

Differential Scanning Calorimetry

Activity assay of LF

**Results and Discussion**

**SUMMARY**

**BIBLIOGRAPHY**

**APPENDIX**
