I am about to submit my Ph.D. thesis.

Looking back into the time makes me very nostalgic and I can see so many people who have contributed to make it a reality. It is a pleasure to convey my thanks to them all in my humble acknowledgment.

The person, whose enormous support enabled me to complete my thesis within three and half years of joining the lab, is my supervisor Dr. Debasish Mukhopadhyay. Being the first student of the lab, I got his full attention. His advice and guidance from the very early stage of this research gave me the chance to develop extraordinary expertise throughout the work. Above all and the most needed, he provided me unflinching encouragement and support in various ways. Whenever I was frustrated he used to boost me up with his positive thinking. How to write a paper, how to make a presentation attractive, I have learned from him. I am going to miss the liberty of working I obtained throughout my PhD tenure. Thank you sir, thank you for everything.

Since, initially we did not have the proper lab set up, I used the facility of Prof. Nitai P Bhattacharyya's lab to start my work. His truly scientific intuition has made him as a constant oasis of ideas and passionate about science. Both his advices and criticisms enriched the quality of my research. The support I got from him as well as from all the members of his lab is unforgettable.

I recall the encouraging words from Prof. Abhijit Chakraborty after every departmental seminar and feel proud as he referred me “Asset of SG”. Helps provided by Prof. Subrata Banerjee, Head, Structural Genomics section, Saha Institute of Nuclear Physics, in all respects are also unforgettable.

Pulak sir, Ajoy da and Tapan da of Biophysics Division of Saha Institute of Nuclear Physics deserve special thanks as they have helped me doing electron microscopy experiment.

I must remember my teachers in college and university, especially Prof. Chanchal Kumar Dasgupta whose dedication towards science instigated me to do research on basic science.

I am very much thankful to Manisha di, Pritha di, Amitava da, Madhumita di, Sutapa di and Swasti for their help in the initial molecular biology and cell biology experiments.

I am very lucky to have such wonderful juniors like Arunava, Samir, Shounak and Kastuti. Their friendly and cooperative attitude provided a healthy working environment in the lab.
After shifting of Structural Genomics wet lab to the 4th phase building the inter lab boundaries disappeared and everybody was so helpful that the working environment became more suitable for my research. Half an hour chat with the so called “Mashla Group” of 4th phase lab can act as a very good anti depressant. I am going to miss all the fun I have enjoyed here in last one year. I will never forget the company of Anita, Nandini, Aditi di, Lakshmishree di, Sudip, Avik, Sumanta da, Dipankar da, Sutapa Di, Suchismita, Kamalika, Moumita, Jayeeta, Srijit, Soumyajit da, Suman da, Prabir da Utpal da, Saikat da and Sushanta da.

It is a pleasure to give thanks to my Post. M.Sc. batch mates Amit, Anup, Anupama, Pallab, Shib, Parijat and Mithun with whom I have shared all my excitements and frustrations of research. I wish I will never forget their company.

I want to convey a special acknowledgement to Eashita. She not only helped me get an accommodation in SINP guest house whenever I needed it, but she also took care of my comfort during my stay. Thank you very much Eashita.

Sutapa di and Atri deserve special thanks for their patient assessment of the draft of my thesis. The helps from all the members of CeM&B, Biophysics division and SG Section are unforgettable.

Where would I be without my family? My Maa and Baba have struggled a lot to give me and Bhai a proper education so that we could have a good life. After my father’s death my Mama took the entire responsibility of my higher education. What I am today is because of him.

I shall never forget the supports and care I obtained in the last four years from Mamma, Maa, Bapi and Misti. By words I can not explain their contributions throughout my research period.

I have no words to express my gratitude to my soul mate, my dearest husband, Swasti. He is the source of my inspiration. In one way he is my best friend and on the other way my advisor too. From last two years he is staying alone in Munich and doing Post. Doc. He forced me to stay here and complete my research. It is because of you at last I have written a thesis. Thank you for everything.

Finally, I would like to thank everybody who was important to the successful completion of my thesis, as well as express my apology that I could not mention personally one by one.

Mithu Saha
