ACKNOWLEDGMENTS

First of all, I would like to thank my supervisor Dr. Ravi Sirdeshmukh who was very kind and patient and always interested in the progress of my work. The immense freedom he offered me in designing and executing the experiments was of a great help to me in developing my independent thinking ability.

The constant help and encouragement I received from the director of our institute, Prof. D. Balasubramanian (who is also the head of the research group to which myself and my supervisor belong), is truly invaluable. He always showed a keen interest in the progress and rapid completion of the projects of research fellows.

The founder director of CCMB, Dr. P. M. Bhargava was always available to the research fellows for scientific discussions in spite of his extremely tight schedule. Discussions with him have greatly improved my confidence to do science and have enabled me to understand the concept of scientific approach to any problem, be it scientific or nonscientific.

The former director of CCMB, Dr. Sharat Chandra was very kind and helpful to everyone at CCMB. He mingled with us freely and we had excellent scientific discussions with him.

Dr. Gowrishankar possessed what could be the qualities of an ideal teacher and scientist and I had several things to learn from him. Discussions with him were very educative. Both Dr. Dipankar Chatterjee and Dr. Gowrishankar have always encouraged me and generously admired my progress.

Thanks to Dr. Bhargava, the tremendous care taken in planning and organizing various things during the establishment of the CCMB has made all our lives very comfortable. The centralization of the instruments maintenance and storage and issue of fine chemicals have greatly increased the ease with which experiments could be done in CCMB. Never while doing an experiment, was there any necessity for us to worry about something that is unrelated to the experiment itself. By being a part of CCMB, we had several unique and exciting opportunities to not only listen to but also meet and freely discuss with various eminent people who visited our institute at different periods. The interesting discussions we had among ourselves in many of our group meetings were intellectually pleasing too.

I have extensively used the well maintained animal house facility of CCMB for my work. Dr. Hari Narayana Rao was always very active and enthusiastic in helping me. Jayaraman with his excellent pair of hands has helped me for dissecting fetal mice, immunizing and bleeding rabbits and performing hepatectomy in rats. Dwarakanath was another very patient and skilled worker whose technical help I enjoyed in many of my experiments. Only rarely one gets to see workers with as much sincerity and helping tendency as Nageshwar Rao and Allaiah. I very much admire them.
The neat work Raju did in washing glassware and plasticware, maintaining the lab clean and autoclaving the materials required for the experiments is greatly appreciated.

Nageshwara Rao and Rehman made all the photographs presented in this thesis. Their serious concern for the quality of the prints was remarkable. Giridharan and Premkumar made the line drawings and did the lettering work in the figures. Baskar and Prakash made the Xerox copies of the thesis. Their help is very much appreciated.

Murthy, Vijayarangam, Ramadasu and other colleagues of our floor were very cooperative. My thanks are due to Vijayarangam and Ramadasu for letting me have some of their experimental results in this thesis.

Kameshwari painfully proofread my thesis and always came forward to help me whenever I needed help. The company of Murali, Sundaram, Sanjay, Dattananda, Uma Devi, Sushil and Poonam made my stay at CCMB very pleasant. I enjoyed the warm friendship of Sreekant, Subhangi, Nambi, Vijaya, Krishnaveni, Muralikrishna, Anil, Vinisha, Uma, Ragavendra, Asha, Manna, Shiv, Amit, Patil, Swamynathan, Naren, Vidya and Radha who helped me at various stages of my Ph.D project.

All my research fellow friends were very supportive and friendly. They helped me in many a difficult moment I had to pass through during the course of my Ph.D work. The dinner table conversations we had every day will no doubt remain as pleasant memories in our minds in the years to come.

My colleagues at the first floors of east and west wings were always tolerant to the interruptions caused to their work whenever I used their computer for typing my thesis.

I, of course, received a great deal of encouragement and support from my parents, my sister and many of our relatives all through the course of my Ph.D work and am greatly indebted to them for that.

I would like to thank CSIR and CCMB for providing me the fellowship.
