ACKNOWLEDGEMENTS

I don’t know from where I should start. There is a huge list of people who have helped me at every step in completing this work.

It was a wonderful experience to work with Big Bosses, Vineeta and Satyajit. Under the shade of their knowledge, I learnt a lot about Immunology. They taught me how critically analyse and interpret data. How to go about solving technical and conceptual problems during work. They made me learn about excitement and curiosity of the results. How to design new experiments proving various hypotheses. Best thing I like and shared with them was freedom of working and using different ideas in this project. They never refused and denied if I want to try some new experiment on my own. They were always ready for help and discussion. They have a major role in development of my scientific aptitude. I would like to give my gratitudes to them.

A group of people who have indirectly contribute in this project were my doctoral committee meeting members whose suggestions and critics helped me doing better. Dr. Kanury Rao, Sudhanshu Vrati and Dr. Anna George. There were some non committee members who have given their critical comments on email. They were Jeanine Durdik and Ranjen Sen. I like to give my acknowledgements to all of them.

I like to thank Dr. Basu for providing opportunity to work in this Institute.

I like to thank my M.Sc Boss, Dr. Murlidhar who actually seeded Immunology in me. He was always there to inspire and encourage me to do a better job.

I would like to thank Mr. Akhilesh Kumar, who always helped in removing hurdles on the way of this work.

When I join this lab, I was bit scared to work with human system. One reason was availability of blood. I realized that I would be needing a lot of blood if I want to continue work in this system. I found many more people beyond my expectations were ready to give blood. No matter how much blood I take, no matter how brutally I bleed them, no matter what time I am calling them, they were always ready to help me. Vikram, Sudip, Abhijit, Nagendra, Achal, Anjali, Lakshmipathi, Nitin, Poonam, Reema, Beena, Deepti, Arpita, Suresh, Sanjay, Rakesh, Gunjan, Vineeta, Satyajit, Anna, Ganga, Kondal, Ramesh, Mamta are those who have consistently gave blood. I acknowledge all of them. Without them this work would have never been completed. There is a special contribution of Ashok in this work, who taught me the technique of taking blood.

It was very tough to bear ups-downs during 5-year period. People like Anjali, Reema and Poonam helped me and directed me at times when I need. My batch mates Reema, Manjula, Renuka, Gopal, Sudip, Sarjana and Noman, I enjoyed first year of my Ph.D. They listened and bear my shouts and scoldings which helped me in building up my personality. They helped me in providing a cheerful and healthy atmosphere to give diversion in this tough period.
During my first year of joining laboratory, my 'guru' 'Sanjeev' who helped me learning and understanding Immunology. I learned about human system from Ebenezer Satyaraj. I enjoyed company of old members of Immunobiology group like Roshini, Achal, Nagendra, Jayant and present members Chandreshkar, Beena, Vanitha, Arpita, Sanjay, Suresh, Summena, Sangita, Monika, Paushali and Sanchita.

I would like to give thanks to Ram Singh, Pyar Singh, Uncle, Darbaan and Jawahar, who not only provide food to us in the mess but also care for us like our family members.

I want to thank Babu Lal for timely help in zeroxing and Satish for binding. I also want to thank Mahavir and Rawat who helped even at non-office hours of duty.

I owe to my parents and my brothers Vikas and Nitin. Today, I am here because of them. This work can never be completed without their sacrifice and constant help. They were my source of inspiration to complete this work. There are no words to acknowledge them.
