ACKNOWLEDGEMENTS

The road was long and the journey was arduous. But I have never been alone. There are people to accompany, there are people to assist, there are people to inspire. The fatigue had never been able to have its full reign. Every time I became punctuated by it, they came with their wisdom to tell me the desired next and I resumed. Now as I have come at its juncture let me walk back down the memory lane and feel them once again.

Melancholy takes me over as I feel that I have to move away from Prof. Rajaraman, my thesis supervisor. I offered him a cacophony of a young indisciplined soul. He got the music out of it. I gave him the bits and pieces of myself. He fused it into a harmonious whole. Every time I stumbled against any temporary insincerity, the impulse of an ever agile and alert mind made me straight up. It filled me with a shame, but brought me immediately on the track with renewed vigour. When I joined with him "Physics" was just a subject for me which I liked. Today when I am coming out, I have learnt that "Physics" is also a religion and it has its ethics.

I shall cherish all along the love and affection of the entire SPS faculty I have been enjoying over the years. It is a pleasure to remember Prof. Deepak Kumar who first introduced me to the "stranges" and "charms" of "Quantum Hall Effect" during an M.Sc. project. And it was a love at first sight. This apart, his valuable suggestions on so many occasions have enriched me so much.

Prof. Ramaswamy is unforgettable. Every time I approached him, he helped me out like he does to almost all of us. The computational facilities
which he made available for me helped me to carry on a good part of the numerical work done here. It's really a great experience to be here with him for such a long time.

So helpful is Dr. Subir Sarkar. Quite often he took out some of his valuable time to assist me in my numerical work. I have been greatly benefitted by discussing with him on so many occasions.

I fondly remember Dr. S. P. Das for his valuable advice on so many occasions and a caring attitude for me.

It is really great to remember Dr. Sanjay Puri, Dr. Subhasis Ghosh, Prof. Akhilesh Pandey, Dr. Rupamanjari Ghosh, Dr. Prasenjeet Sen, Dr. H. B. Bohidar, Dr. A. K. Rastogi and Dr. S. S. N. Murthy for their warm and useful suggestions and advice. I am also very thankful to Prof. S. Raichaudhury of Delhi University for his useful advice and encouragement.

Gone are the "Jurassic" days of SPS when I came here at 1992. I still vividly remember how my seniors like Saroj, Shibkrishna, Vishal, Debashish, Parongoma Subhalaksni were thrilled when the big "Alpha" workstation came to this department to rule over the poor 386s. I remember so many interesting moments I spent in their company. Awadesh and Asad are being greatly missed by me since they have been missing from here. Now in the "Cyber age" as a "big senior" I am enjoying equally the warmth and wrath (As I ask them to leave the computer terminal quite often for me as a respect to seniority) of Brojen, Charan, Upendra and Sudha and sometimes my big friend Kumela. It's a pleasure to remember endless chatting with Shubhabrata, Shubhashish (The Nearest Neighbour), Sandip, Subir and Saugata on so many interesting things. Shubhabrata's effort to educate me about so many interesting experiments in semiconductor systems has been thoroughly enjoyed. I also like to remember the nice company of Pankaj, Majid, Ajit,
Anjana, Vikash, Shailesh, Surendra, Mehdi and Jagtar which I had here. I also like to thank SPS staffs for their co-operation.

Old friends are like old wine. I fondly remember Indrajeeet, Amal and Abhik for offering me the taste of their warm friendship time and again. It is nice to remember Anamikadi for more than one reason. Apart from sharing her knowledge in numerics with me she has been so supportive on so many fronts.

Over the years I have a chance to interact with quite a good number of physicists working in related fields. I have been greatly benefitted by discussions with them. In this respect I gratefully remember Dr. Sumathi Rao, Dr. R. Shankar, Dr. Tapash Chakrabarty, Prof. G. Baskaran, Dr. S. S. Mandal, Dr. S. L. Sondhi and Dr. Susanne Viefers. The useful discussions regarding the numerical solutions of partial differential equations with Dr. G. Jayaraman and Prof. S. R. K. Iyengar of neighbouring IITD are greatfully acknowledged.

I also like to thank Dr. (of different variety) N. C. Bhakta for keeping my bronchi active against Delhi’s terrible pollution.

At last I have come to my home, my family. Here are the people in whose patience I have indulged so much. They never felt it. Their endless love shielded me from everything. But I have never given them any shield from anything. At every moment of agony I have just thrown myself into the wishdom of my father, the tender care of my mother and sister and my maternal aunts (Chita, Fu, Nadi, Fuldi) and uncle (Mejo). I particularly remember with a heavy heart Ranga, Sejo and Didu who left us for ever during this period. The habit of going through a wide range of references helped me quite a lot during this period of research. I fondly remeber that I acquired this habit during my school days under the guidance of my maternal
aunt Chita. I also like to thank my brother-in-law Samad for his friendly encouragement. All I can say to them is that I have just tried to work hard to meet your expectations from me and I shall continue to do so.
