ACKNOWLEDGMENTS

No words can express my gratitude to You, “My Lord - The Most Merciful Almighty”, for providing me this opportunity and showering strength and wisdom to step into the excellent world of Science. You have given me the power to believe in myself and pursue my dreams.

One of the joys of completion is to look behind, the journey traversed, and fondly remember all those who have helped and supported. At the outset, I express my deep sense of gratitude to my Supervisor, Prof. Rohit Shrivastav, who has the attitude and the substance of a genius. Despite my all limitations, he continually and convincingly implanted and nurtured in me the spirit of a true researcher. Without his valuable guidance and persistent help this research would not have been possible. I could not have imagined a better advisor and mentor for my Ph.D. Besides the science, my association with him has been a great learning experience of life. I submit my honest and humble thanks to him for bringing my dreams to reality.

I feel honoured to express my overwhelmed thanks to Dr. Mrinal R. Pai, Scientist ‘F’, Bhabha Atomic Research Centre, Mumbai, for providing me the experimental facilities in BARC and for being a wonderful guide. Her scientific advices and many insightful discussions and suggestions paved my way to the success.

Grateful thanks I offer to Prof. Sahab Dass, Dept. of Chemistry, DEI, and Prof. Vibha R. Satsangi, Dept. of Physics & Computer Science, D.E.I., for taking keen interest in my work and providing crucial contributions that formed the backbone of my research. Their valuable advices, useful discussions, scientific acumen, and willingness to share bright ideas; all I would sorely miss once I move out from here.

Thanks are also due to the Director of the Institute, Prof. V. G. Das, and the Head – Department of Chemistry and Dean – Faculty of Science, Prof. L. D. Khemani, for providing necessary facilities and being a source of inspiration to me throughout.
I am equally thankful to the Teachers of the Dept. of Chemistry, DEI: Prof. Satya Prakash, Prof. M. M. Srivastava, Prof. Pankaj, Prof. Surat Kumar, Prof. K. Maharaj Kumari, Dr. Shalini Srivastava, Dr. Anita Lakhani, Dr. Radhika Singh, Dr. Maninder Minu and Dr. Pushpa Sahni for their kind words of encouragement at every stage. Thanks are also due to the supporting laboratory staff of the Dept. of Chemistry and University Science Instrumentation Centre, DEI, for the technical support and services they rendered to me.

While working on samples’ characterization, I had the privilege to use the facilities available at country’s premium research centers. I offer my humble gratitude to Dr. Sadhana Railu, Scientist ‘E’ EMD Division, NEERI, Nagpur; Dr. Dinesh Deva, IIT, Kanpur; Dr. Sher Singh, BARC, Mumbai; and Dr. Ambuj Tripathi, IUAC, New Delhi for their kind support.

I would like to thank all my friends and colleagues. They, by unconditionally extending their helping hand and kind words of support, gave me confidence in my work even at most difficult times.

I can barely find words to express my love and respect to my parents, for their unmatched love, emotional support, intellectual stimulation and encouragement, inspired me through out to pursue a dream which only they truly believed. This thesis is a result of their belief in me that I will overcome all obstacles and hindrances that come my way to success. My brother and sister in law need a special mention for providing me unequivocal support, thank you for loving me immensely.

At the end, I would be failing in my duty if I do not acknowledge receiving financial assistance from Department of Science and Technology (DST) and University Grants Commission (UGC), Govt. of India, in the form of Junior Research Fellowship and UGC-BSR Fellowship for Meritorious Students, respectively.

August, 2013               (Nirupama Singh)
