ACKNOWLEDGEMENT

A research work is not merely the toil of a single individual. A number of people in many immeasurable ways, knowingly or unknowingly become a part of this process. My thesis, too, is not exceptional and therefore I would like to take a moment here to offer my sincere gratitude to all those people without whose support and contribution this endeavor could not have become successful.

At first, my supervisor Dr. R. C. Rajkhowa sir and co-supervisor Dr. S. Sarma sir deserve a special mention. Without their constant guidance and belief in my topic, this work could not have been conceived the way it is. In this uneven journey though there were numerous moments of confusions and set-backs, they pushed me forward to work dedicatedly overcoming all the hurdles and kept my hopes alive in completing my work successfully. I thank both of them for their patience and trust that they bestowed upon me during my journey which will forever be treasured in the core of my heart.

Secondly, my sincere thanks and gratitude goes to Dr. Jatin Kalita, Head of the Department of Zoology, Gauhati University for getting immense help during my research period. Also, I would like to extend my heartfelt gratitude to Dr. Jogen Ch. Kalita, Professor, Department Of Zoology, Gauhati University for guiding me at every step of my work and help me to reach into my perfection. Moreover I would like to offer my honour and gratitude to all the teachers of the Department of Zoology, Gauhati University devoid of whose kind help, guidance and valuable suggestions my task would have been tougher.

I am indebted to Dr. Azizur Rahman, Reeling officer, Govt. Basic Muga Seed Farm, Khanapara for allowing me to use to conduct my study by rearing the samples in their farm. Special thank also goes to Dr. Dipali Devi and Mr. Subrata Goswami, IASST, Guwahati for providing me the technical facility to analyze the silk quality of the sample. Apart from them I will also remain grateful to Mr. Niranjan Bhagawati, IASST for his immense help. Special thanks to Dr. R.K. Sarma, Department Of Microbiology, College of Veterinary science, AAU for providing me their timely help and offering me the rare opportunity to use the laboratory to do protein band analysis. Other persons whom I want to offer my heartfelt regard and gratitude are Mr. Iftikar Husain and Mr. Naba Das, Department Of Biotechnology, College of Veterinary Science, AAU for giving me the chance to use instrument in their laboratory.
Again I would like to thank Dr. A. K. Sahu, Scientist D, Central Silk Board, Boko for his much needed help.

I cannot imagine to face the difficulties that I have faced in the experimentation process, had there been no help and support from the non-teaching staff of Biochemistry department, College of Veterinary Science, AAU and the department of Zoology, Gauhati University. Moreover my special thanks goes to Mr. Sakir Choudhury for helping me and assist me in every possible way during my working period.

Beyond the academic and professional domain, a lot of people have helped me to remain calm and composed by supporting me at every phase of my research. Although there can be no hierarchy of their affectionate influence, first and foremost I would like to thank my parents as they have supported me and stood by me throughout my work; whatever need it is be the untimely travelling across the state, collecting samples in odd weather or staying out late for planning experiments and writing my thesis. After the day’s hectic schedule whatever moral support I received from my elder brother (Bimal), sister-in-law (Niva), little daughter (Bhuyashi) and also my other family members mama, mami, babu and moni will always be treasured in my heart. They remain as my constant sources of inspiration working as a catalyst in marching towards my goal. Last but not the least I want to pay my homage to the soul of my departed husband late Satyendra Nath Kalita whose support and sacrifice in completing this work will be cherished in years to come.

I would also like to thank all my lab mates of both department of zoology, Gauhati University and department of biochemistry, College of Veterinary Science. Moreover my sincere thanks to Mr. Pankaj Das who supported me whole heartedly throughout my endeavor.

But my list will remain incomplete if I don’t mention certain persons such as Arup Sarma, Bandana Deka, Sikha Rani Kalita, Sankar, Kishore and Rubul whose selfless and unconditional help and support are very much instrumental in doing my research work successfully.

(Kakali Talukdar)
