ACKNOWLEDGEMENT

The journey of submission of my thesis begins at home, when I was very young. I always wanted to be a scholar and dreamt about doing research. The present work was twisted, turned and modified several times. The ingredients of the observations, experiences and knowledge of different people helped in bringing up of this work.

I am immensely indebted to Dr. Tahir Asghar, who channeled my fragmented thoughts and framed it in a manner that helped me to see through the subject clearly. It is for his extraordinary cooperation, encouragement, academic as well as moral, and supervision that this work could see the light of the day. I am grateful to Prof. Shamsuddin, Chairperson of CRCAEES, for his valuable suggestions and remarks. His working ability inspired me to work harder. In last days of submission of this research work, his morale boosting and cooperation was of great help.

Thanks are offered to those who in some ways contributed to the collection of the material and discussions leading to clarity of issues. I recall my long and thought provoking discussions with various eminent scholars during my field trip to United Kingdom. I visited CREES department, University of Birmingham and discussed my research work with respected Prof. R.W. Davis and Dr. Julian Cooper, Director (CREES). They provided me their valuable suggestions and research materials. Dr. Petch, professor, Geography department, Manchester Metropolitan University, Manchester, extended his help on various aspects of mapping and Geographical Information Systems (GIS). I still remember my conversation with him. I asked, "Dr. Petch, it is possible to map critical environmental zones when you have all the data available, but I am planning to do the same without much availability of data. Is it possible?" He replied smilingly, "nothing is impossible". This sentence was an inspiration which helped me to work harder.

I appreciate the conversation with Dr. Micklyn, Assistant Professor, Geography department, Edinburgh University. He learned about my topic during our brief conversation and said, "Had I be in your place, I wouldn't have taken this topic." I took it as a challenge then and the work is in front of you now. I am grateful to Dr. Maria Elsa
Joao, Lecturer, Geography department, London School of Economics, who gave precious suggestions, which helped me shaping the thesis.

I received timely cooperation from some unexpected quarters at a crucial stage of this work, which made the tedious task of tying, proof reading, photo stating and binding look easy. I express my hearty gratitude to Dr. Raheel Siddiqui, who was a constant supporter and inspirer, at all stages of the development of this work.

My family members, especially my father, mother, brothers: Saurabh, Abhishek and Vivek, have always been by my side whenever I needed them and a constant source of inspiration throughout.

I shall be failing in my duty if I do not mention about my friends, Swagata, Poonam and Rushda, who were engaged right from the initiation to the accomplishment of this work. Their valuable suggestions and moral support were of immense use. To them I owe a lot, expressing my sincere gratitude. In fact, in one way they always extended their shoulders to cry on whenever being fed with the research work, which is quite obvious as a human being.

I am also thankful to my other friends who did whatever they could in their respective capacities for creating a conducive atmosphere for this work, particularly, Dr. Bhuvanswari, Dr. L.R. Gopinath, Dr. Alpana Banerjee, Dr. Shubhra, Parimala Rao, Vipin Sirohi, Dr. Mehfooz, Sangeeta and Kamlesh.

I feel special gratitude to my friends who were there in London with me during my field trip and helped me collecting and photo stating materials, Sagarika, Mr. Shaheen, Ajay Kumar, Dudley Thomas, Renu and Dr. Girish.

While, thanking all those again, who have contributed towards the completion of this work; error and inadequacy, if any, herein remain to be mine alone.

20th July 1999.
