ACKNOWLEDGEMENTS

I take this opportunity to express my sincere gratitude towards Prof. H.K. Das for his valuable guidance and supervision, constructive criticism and helpful suggestions throughout the period of this study and in preparation of this manuscript. I must also mention of all the physical facilities provided by him for successful conduct of this study.

I am also indebted to Dr. (Mrs.) Aparna Dixit for giving valuable suggestions in the conduct of this study and the preparation of this manuscript. My sincere thanks are due to Dr. Gauranga Mukhopadhyaya for constant guidance in the conduct of various experiments throughout the period of study and providing insight into analysis, interpretation and presentation of data. A grateful mention must be made of his painstaking efforts in drafting the present report in a systematic manner and in preparation of manuscript.

I am thankful to all the members of the genetic engineering unit for their cooperation during the
conduct of this study, without their support this study could not have been completed. My thanks are also due to Mr. Saini for his help in the preparation of photographs.

I also wish to record the unstinted and wholehearted cooperation rendered by my friends and colleagues Ashutosh, Arpita, Sirish, Vaishali, Sanjeev, Jagdish, Ritu, Aparna and Ranjana. I shall ever remain grateful to them. I am also thankful to my brother Dhananjay Paranjape for letting me use the internet facility at his place.

It has been my husband Parag Karmarkar, who has encouraged me to complete my work. He has taken the brunt of my tantrums and shared all ups and downs with me. This thesis would not have been possible without his support. I owe this thesis to him.

Rashmi
