Title Sheet	I
Certificate from the supervisor	II
Acknowledgement	III
Profile	IV
Contents	V
1. Introduction	1
1.1. Introduction	2
1.2. Traditional load flow methods	4
1.2.1. Second order methods	6
1.2.1.1. Ill conditioning of the load flow problem	6
1.2.2. Optimal multiplier method	7
1.2.3. The continuation power flow	8
1.2.4. Multiple load flow	10
1.2.5. Series load flow	10
1.2.6. Solution of large systems: Quasi Newton load flow	11
1.2.6.1. Using predictions	12
1.2.7. Three phase load flow	13
1.2.8. Load flow for distribution systems	15
1.3. Non-conventional approaches for load flow solution	16
1.4. Conclusion	19
2. Perturbation based load flows	21
2.1. Introduction	22
2.2. Load flow based on local search technique	22
2.2.1. The algorithm of the local search	24
2.2.2. Performance of the local search based load flow	25
2.3. Load flow based on linear perturbation	28

2.3.1. The algorithm of the linear perturbation	29
2.3.2. Test results of the linear perturbation	29
2.4. Test results for random initialization	32
2.5. Time comparison	32
2.6. Applications of the perturbation based load flows	33
2.6.1. P-V/Q-V curve using perturbation based techniques	34
2.7. Conclusion	36
APPENDIX A2	
A2.1. Terms of power mismatches for the changes in Bus	37
A2.2. Calculation of power mismatches for the change in voltage magnitude	37
A2.3. Calculation of power mismatches for the change in phase angle	38
3. PSO based decoupled load flow	40
3.1. Introduction	41
3.2. Particle swarm optimization	42
3.3. Development of the PSO based decoupled algorithm	42
3.3.1. Particle Structure	44
3.3.2. Formation of pbest solution	44
3.3.3. Formation of gbest and convergence criterion	45
3.4. Parameter settings	47
3.5. Results for the decoupled algorithm	51
3.6. Improvement schemes	51
3.7. Results for the decoupled algorithm with improvement schemes	52
3.8. Performance analysis	59
3.9. Conclusion	64
4. PSO based coupled load flow	65
4.1. Introduction	66

4.2. Development the algorithm	66
4.3. Parameter settings	68
4.4. Results for the PSO based coupled algorithm	70
4.5. Improvement schemes	81
4.6. Characteristics of the algorithm with improvement schemes	82
4.7. Multiple load flow solutions using the coupled algorithm	91
4.8. Multiple power flow solutions through PSO and Optimal Multiplier based Newton-Raphson method	104
4.9. Performance analysis	115
4.10. Conclusion	119
5. Two-stage GA based load flow	120
5.1. Introduction	121
5.2. The Genetic Algorithm	121
5.3. Constraint enforcement procedure for load flow solution	122
5.4. Development of the two-stage GA based load flow	123
5.4.1. Incomplete GA	124
5.4.2. Complete GA	126
5.4.3. Flowchart of the two-stage GA based load flow	128
5.5. GA parameter settings	129
5.6. Test results of Two-stage GA based load flow	130
5.7. Impact of the improvement schemes	130
5.8. Convergence characteristics of the proposed method	131
5.9. Performance analysis	138
5.10. Conclusion	142
6. Comparison and Conclusion	144
6.1. Introduction	145
6.2. Consideration of the voltage controlled buses	145
6.3. Application of the FACTS devices	146

6.3.1. UPFC power equation	147
6.3.2. Implementation of the FACTS devices	148
6.3.3. Load flow results with the FACTS devices	150
6.4. Time comparison of the evolutionary techniques	151
6.5. Performance under critical conditions	154
6.6. Conclusion	155
6.7. Shortcoming of the reported works	156
6.8. Scope of future research	156
6.9. Data and results	157
6.9.1. Stagg 5-bus system data	157
6.9.1.1. Line data of 5-bus test system	157
6.9.1.2. Bus data of 5-bus test system	157
6.9.1.3. Network diagram of Stagg-5-bus system	157
6.9.2. IEEE 14-bus system data	158
6.9.2.1. Line data of 14-bus test system	158
6.9.2.2. Bus data of 14-bus test system	158
6.9.2.3. Network diagram of IEEE 14 bus system	159
6.9.3. IEEE 30-bus system data	160
6.9.3.1. Line data of 30-bus test system	160
6.9.3.2. Bus data of 30-bus test system	161
6.9.3.3. Network diagram of IEEE-30 Bus System	162
APPENDIX	163
1. Particle Swarm Optimization	164
2. Genetic Algorithm	165
